INTERNATIONAL ELECTROTECHNICAL COMMISSION

**POLYVINYL CHLORIDE INSULATED CABLES
OF RATED VOLTAGES UP TO AND INCLUDING 450/750 V -****Part 5: Flexible cables (cords)****FOREWORD**

- 1) The IEC (International Electrotechnical Commission) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of the IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, the IEC publishes International Standards. Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. The IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of the IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested National Committees.
- 3) The documents produced have the form of recommendations for international use and are published in the form of standards, technical reports or guides and they are accepted by the National Committees in that sense.
- 4) In order to promote international unification, IEC National Committees undertake to apply IEC International Standards transparently to the maximum extent possible in their national and regional standards. Any divergence between the IEC Standard and the corresponding national or regional standard shall be clearly indicated in the latter.
- 5) The IEC provides no marking procedure to indicate its approval and cannot be rendered responsible for any equipment declared to be in conformity with one of its standards.
- 6) Attention is drawn to the possibility that some of the elements of this International Standard may be the subject of patent rights. The IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 60227-5 has been prepared by subcommittee 20B: Low-voltage cables, of IEC technical committee 20: Electric cables.

This consolidated version of IEC 60227-5 is based on the second edition (1997) [documents 20B/228/FDIS and 20B/243/RVD] and its amendment 1 (1997) [documents 20B/255/FDIS and 20B/263/RVD].

It bears the edition number 2.1.

A vertical line in the margin shows where the base publication has been modified by amendment 1.

Numéros des publications

Depuis le 1er janvier 1997, les publications de la CEI sont numérotées à partir de 60000.

Publications consolidées

Les versions consolidées de certaines publications de la CEI incorporant les amendements sont disponibles. Par exemple, les numéros d'édition 1.0, 1.1 et 1.2 indiquent respectivement la publication de base, la publication de base incorporant l'amendement 1, et la publication de base incorporant les amendements 1 et 2.

Validité de la présente publication

Le contenu technique des publications de la CEI est constamment revu par la CEI afin qu'il reflète l'état actuel de la technique.

Des renseignements relatifs à la date de reconfirmation de la publication sont disponibles dans le Catalogue de la CEI.

Les renseignements relatifs à ces révisions, à l'établissement des éditions révisées et aux amendements peuvent être obtenus auprès des Comités nationaux de la CEI et dans les documents ci-dessous:

- **Bulletin de la CEI**
- **Annuaire de la CEI**
Accès en ligne*
- **Catalogue des publications de la CEI**
Publié annuellement et mis à jour régulièrement
(Accès en ligne)*

Terminologie, symboles graphiques et littéraux

En ce qui concerne la terminologie générale, le lecteur se reportera à la CEI 60050: *Vocabulaire Electrotechnique International* (VEI).

Pour les symboles graphiques, les symboles littéraux et les signes d'usage général approuvés par la CEI, le lecteur consultera la CEI 60027: *Symboles littéraux à utiliser en électrotechnique*, la CEI 60417: *Symboles graphiques utilisables sur le matériel. Index, relevé et compilation des feuilles individuelles*, et la CEI 60617: *Symboles graphiques pour schémas*.

Publications de la CEI établies par le même comité d'études

L'attention du lecteur est attirée sur les listes figurant à la fin de cette publication, qui énumèrent les publications de la CEI préparées par le comité d'études qui a établi la présente publication.

* Voir adresse «site web» sur la page de titre.

Numbering

As from 1 January 1997 all IEC publications are issued with a designation in the 60000 series.

Consolidated publications

Consolidated versions of some IEC publications including amendments are available. For example, edition numbers 1.0, 1.1 and 1.2 refer, respectively, to the base publication, the base publication incorporating amendment 1 and the base publication incorporating amendments 1 and 2.

Validity of this publication

The technical content of IEC publications is kept under constant review by the IEC, thus ensuring that the content reflects current technology.

Information relating to the date of the reconfirmation of the publication is available in the IEC catalogue.

Information on the revision work, the issue of revised editions and amendments may be obtained from IEC National Committees and from the following IEC sources:

- **IEC Bulletin**
- **IEC Yearbook**
On-line access*
- **Catalogue of IEC publications**
Published yearly with regular updates
(On-line access)*

Terminology, graphical and letter symbols

For general terminology, readers are referred to IEC 60050: *International Electrotechnical Vocabulary* (IEV).

For graphical symbols, and letter symbols and signs approved by the IEC for general use, readers are referred to publications IEC 60027: *Letter symbols to be used in electrical technology*, IEC 60417: *Graphical symbols for use on equipment. Index, survey and compilation of the single sheets* and IEC 60617: *Graphical symbols for diagrams*.

IEC publications prepared by the same technical committee

The attention of readers is drawn to the end pages of this publication which list the IEC publications issued by the technical committee which has prepared the present publication.

* See web site address on title page.

POLYVINYL CHLORIDE INSULATED CABLES OF RATED VOLTAGES UP TO AND INCLUDING 450/750 V –

Part 5: Flexible cables (cords)

1 General

1.1 Scope

This part of IEC 60227 details the particular specifications for polyvinyl chloride insulated flexible cables (cords), of rated voltages up to and including 300/500 V.

All cables comply with the appropriate requirements given in IEC 60227-1 and each individual type of cable complies with the particular requirements of this part.

1.2 Normative references

The following normative documents contain provisions which, through reference in this text, constitute provisions of this part of IEC 60227. For dated references, subsequent amendments to, or revisions of, any of these publications do not apply. However, parties to agreements based on this part of IEC 60227 are encouraged to investigate the possibility of applying the most recent editions of the normative documents indicated below. For undated references, the latest edition of the normative document referred to applies. Members of IEC and ISO maintain registers of currently valid International Standards.

IEC 60227-1:1993, *Polyvinyl chloride insulated cables of rated voltages up to and including 450/750 V – Part 1: General requirements*

IEC 60227-2:1979, *Polyvinyl chloride insulated cables of rated voltages up to and including 450/750 V – Part 2: Test methods*

IEC 60228:1978, *Conductors of insulated cables. Guide to the dimensional limits of circular conductors*

IEC 60332-1:1993 *Tests on electric cables under fire conditions – Part 1: Test on a single vertical insulated wire or cable*

IEC 60811-1-1:1993, *Common test methods for insulating and sheathing materials of electric cables – Part 1: Methods for general applications – Section 1: Measurement of thickness and overall dimensions – Tests for determining the mechanical properties*

IEC 60811-1-2:1985, *Common test methods for insulating and sheathing materials of electric cables – Part 1: Methods for general applications – Section 2: Thermal ageing methods*

IEC 60811-1-4:1985, *Common test methods for insulating and sheathing materials of electric cables – Part 1: Methods for general applications – Section 4: Tests at low temperature*

IEC 60811-3-1:1985, *Common test methods for insulating and sheathing materials of electric cables – Part 3: Methods specific to PVC compounds – Section 1: Pressure test at high temperature – Tests for resistance to cracking*

IEC 60811-3-2:1985, *Common test methods for insulating and sheathing materials of electric cables – Part 3: Methods specific to PVC compounds – Section 2: Loss of mass test – Thermal stability test*

IEC 60885, *Electrical test methods for electric cables*

2 Flat tinsel cord

2.1 Code designation

60227 IEC 41.

2.2 Rated voltage

300/300 V.

2.3 Construction

2.3.1 Conductor

Number of conductors: 2.

Each conductor shall comprise a number of strands or groups of strands, twisted together, each strand being composed of one or more flattened wires of copper or copper alloy, helically wound on a thread of cotton, polyamide or similar material.

The conductor resistance shall not exceed the value given in table 1, column 5.

2.3.2 Insulation

The insulation shall be polyvinyl chloride compound of type PVC/D applied around each conductor.

The insulation thickness shall comply with the specified value given in table 1, column 1.

The insulation resistance shall be not less than the value given in table 1, column 4.

2.3.3 Assembly of cores

The conductors shall be laid parallel and covered with the insulation.

The insulation shall be provided with a groove on both sides, between the conductors, to facilitate separation of the cores.

2.3.4 Overall dimensions

The mean overall dimensions shall be within the limits given in table 1, columns 2 and 3.

2.4 Tests

Compliance with the requirements of 2.3 shall be checked by inspection and by the tests given in table 2.

2.5 Guide to use

Maximum conductor temperature in normal use: 70 °C.

NOTE – Other guidelines are under consideration.

Table 1 – General data for type 60227 IEC 41

3.1 Code designation

60227 IEC 42.

3.2 Rated voltage

300/300 V.

3.3 Construction

3.3.1 Conductor

Number of conductors: 2.

The conductors shall comply with the requirements given in IEC 60228 for class 6 conductors.

3.3.2 Insulation

The insulation shall be polyvinyl chloride compound of type PVC/D applied around each conductor.

The insulation thickness shall comply with the specified value given in table 3, column 2.

The insulation resistance shall be not less than the value given in table 3, column 5.

3.3.3 Assembly of cores

The conductors shall be laid parallel and covered with the insulation.

The insulation shall be provided with a groove on both sides, between the conductors, to facilitate separation of the cores.

3.3.4 Overall dimensions

The mean overall dimensions shall be within the limits given in table 3, columns 3 and 4.

3.4 Tests

Compliance with the requirements of 3.3 shall be checked by inspection and by the tests given in table 4.

3.5 Guide to use

Maximum conductor temperature in normal use: 70 °C.

NOTE – Other guidelines are under consideration.

4 Cord for indoor decorative lighting chains

4.1 Code designation

60227 IEC 43.

4.2 Rated voltage

300/300 V.

4.3 Construction

4.3.1 Conductor

Number of conductors: 1.

The conductor shall comply with the requirements given in IEC 60228 for class 5 conductors.

4.3.2 Insulation

The insulation shall be polyvinyl chloride of the type PVC/D, it shall consist of two layers and applied by dual extrusion around the conductor.

The outer layer of insulation shall be of a colour contrasting with that of the inner layer, but shall adhere to the inner layer.

The combined thickness of the inner and outer layer of insulation shall comply with the overall thickness specified in table 5, columns 3 and 4, but at no point the thickness of either layer shall be less than the value specified in column 2.

The insulation resistance at 70 °C shall be not less than the values given in table 5, column 6.

4.3.3 Cord identification

Preferred colour of outer layer: green.

4.3.4 Overall diameter

The mean overall diameter shall not exceed the upper limit given in table 5, column 5.

4.4 Tests

Compliance with the requirements of 4.3 shall be checked by inspection and by the tests given in table 6.

4.5 Guide to use

Maximum conductor temperature in normal use: 70 °C.

Table 5 – General data for type 60227 IEC 43

7	<i>Test of flame retardance</i>	T	IEC 60332-1	-
NOTE – Because of the simultaneous extrusion of the same compound for both layers of insulation, the composite layer shall be tested as one layer and evaluated accordingly.				

5 Light polyvinyl chloride sheathed cord

5.1 Code designation

60227 IEC 52.

5.2 Rated voltage

300/300 V.

5.3 Construction

5.3.1 Conductor

Number of conductors: 2 and 3.

The conductors shall comply with the requirement given in IEC 60228 for class 5.

5.3.2 Insulation

The insulation shall be polyvinyl chloride compound of type PVC/D applied around each conductor.

The insulation thickness shall comply with the specified value given in table 7, column 2.

The insulation resistance shall be not less than the values given in table 7, column 6.

5.3.3 Assembly of cores

Circular cord: the cores shall be twisted together.

Flat cord: the cores shall be laid parallel.

5.3.4 Sheath

The sheath shall be polyvinyl chloride compound of type PVC/ST 5 applied around the cores.

The sheath thickness shall comply with the specified value given in table 7, column 3.

The sheath may fill the spaces between the cores, thus forming a filling, but it shall not adhere to the cores. The assembly of cores may be surrounded by a separator, which shall not adhere to the cores.

The assembly of circular cord shall have a practically circular cross-section.

5.3.5 Overall dimensions

The mean overall diameter of circular cords and the mean overall dimensions of flat cords shall be within the limits given in table 7, columns 4 and 5.

5.4 Tests

Compliance with the requirements of 5.3 shall be checked by inspection and by the tests given in table 8.

5.5 Guide to use

Maximum conductor temperature in normal use: 70 °C.

NOTE - Other guidelines are under consideration.

Table 7 – General data for type 60227 IEC 52

6 Ordinary polyvinyl chloride sheathed cord

6.1 Code designation

60227 IEC 53.

6.2 Rated voltage

300/500 V.

6.3 Construction

6.3.1 Conductor

Number of conductors: 2, 3, 4 or 5.

The conductors shall comply with the requirements given in IEC 60228 for class 5 conductors.

6.3.2 Insulation

The insulation shall be polyvinyl chloride compound of type PVC/D applied around each conductor.

The insulation thickness shall comply with the specified value given in table 9, column 2.

The insulation resistance shall be not less than the value given in table 9, column 6.

6.3.3 Assembly of cores and fillers, if any

Circular cord: the cores and the fillers, shall be twisted together.

Flat cord: the cores shall be laid parallel.

For circular cord having two cores, the space between the cores shall be filled either by separate fillers or by the sheath filling the interstices.

Any filler shall not adhere to the cores.

6.3.4 Sheath

The sheath shall be polyvinyl chloride compound of type PVC/ST 5 applied around the cores.

The sheath thickness shall comply with the specified value given in table 9, column 3.

The sheath may fill the spaces between the cores, thus forming a filling, but it shall not adhere to the cores. The assembly of cores may be surrounded by a separator, which shall not adhere to the cores.

The assembly of circular cords shall have a practically circular cross-section.

6.3.5 Overall dimensions

The mean overall diameter of circular cords and the mean overall dimensions of flat cords shall be within the limits given in table 9, columns 4 and 5.

Table 9 – General data for type 60227 IEC 53

7 Heat-resistant light PVC-sheathed cord for a maximum conductor temperature of 90 °C**7.1 Code designation**

60227 IEC 56

7.2 Rated voltage

300/300 V

7.3 Construction**7.3.1 Conductor**

Number of conductors: 2 and 3.

The conductors shall comply with the requirements given in IEC 60228 for class 5 conductors.

7.3.2 Insulation

The insulation shall be polyvinyl chloride compound of type PVC/E applied around each conductor.

The insulation thickness shall comply with the specified value given in table 11, column 2.

The insulation resistance shall be not less than the values given in table 11, column 6.

7.3.3 Assembly of cores

Circular cord: the cores shall be twisted together.

Flat cord: the cores shall be laid parallel.

7.3.4 Sheath

The sheath shall be polyvinyl chloride compound of type PVC/ST10, applied around the cores.

The sheath thickness shall comply with the specified value given in table 11, column 3.

The sheath may fill the spaces between the cores, thus forming a filling, but it shall not adhere to the cores. The assembly of cores may be surrounded by a separator, which shall not adhere to the cores.

The assembly of circular cord shall have a practically circular cross-section.

7.3.5 Overall dimensions

The mean overall diameter of circular cords and the mean overall dimensions of flat cords shall be within the limits given in table 11, columns 4 and 5.

7.4 Tests

Compliance with the requirements of 7.3 shall be checked by inspection and by the tests given in table 12.

7.5 Guide to use

Maximum conductor temperature in normal use: 90 °C.

NOTE – Other guidelines are under consideration.

8 Heat-resistant ordinary PVC-sheathed cord for a maximum conductor temperature of 90 °C**8.1 Code designation**

60227 IEC 57

8.2 Rated voltage

300/500 V

8.3 Construction**8.3.1 Conductor**

Number of conductors: 2, 3, 4 or 5.

The conductors shall comply with the requirements given in IEC 60228 for class 5 conductors.

8.3.2 Insulation

The insulation shall be polyvinyl chloride compound of type PVC/E applied around each conductor.

The insulation thickness shall comply with the specified value given in table 13, column 2.

The insulation resistance shall be not less than the value given in table 13, column 6.

8.3.3 Assembly of cores and fillers, if any

Circular cord: the cores and the fillers, if any, shall be twisted together.

Flat cord: the cores shall be laid parallel.

For circular cord having two cores, the space between the cores shall be filled either by separate fillers or by the sheath filling the interstices.

Any filler shall not adhere to the cores.

8.3.4 Sheath

The sheath shall be polyvinyl chloride compound of type PVC/ST10 applied around the cores.

The sheath thickness shall comply with the specified value given in table 13, column 3.

The sheath may fill the spaces between the cores, thus forming a filling, but it shall not adhere to the cores.

The assembly of cores may be surrounded by a separator, which shall not adhere to the cores.

The assembly of circular cords shall have a practically circular cross-section.

8.3.5 Overall dimensions

The mean overall diameter of circular cords and the mean overall dimensions of flat cords shall be within the limits given in table 13, columns 4 and 5.

Table 13 – General data for type 60227 IEC 57

FOREWORD

This amendment has been prepared by subcommittee 20B: Low-voltage cables, of IEC technical committee 20: Electric cables.

The text of this amendment is based on the following documents:

FDIS	Report on voting
20B/255/FDIS	20B/263/RVD

Full information on the voting for the approval of this amendment can be found in the report on voting indicated in the above table.

Page 3

CONTENTS

Add the titles of the following clauses and tables:

- 7 Heat-resistant light PVC-sheathed cord for a maximum conductor temperature of 90 °C
- 8 Heat-resistant ordinary PVC-sheathed cord for a maximum conductor temperature of 90 °C

Table 11 – General data for type 60227 IEC 56

Table 12 – Tests for type 60227 IEC 56

Table 13 – General data for type 60227 IEC 57

Table 14 – Tests for type 60227 IEC 57

Page 31

Add, after table 10, the following new clauses:

- 7 Heat-resistant light PVC-sheathed cord for a maximum conductor temperature of 90 °C

7.1 Code designation

60227 IEC 56

7.2 Rated voltage

300/300 V

7.3 Construction**7.3.1 Conductor**

Number of conductors: 2 and 3.

The conductors shall comply with the requirements given in IEC 60228 for class 5 conductors.

7.3.2 Insulation

The insulation shall be polyvinyl chloride compound of type PVC/E applied around each conductor.

The insulation thickness shall comply with the specified value given in table 11, column 2.

The insulation resistance shall be not less than the values given in table 11, column 6.

7.3.3 Assembly of cores

Circular cord: the cores shall be twisted together.

Flat cord: the cores shall be laid parallel.

7.3.4 Sheath

The sheath shall be polyvinyl chloride compound of type PVC/ST10, applied around the cores.

The sheath thickness shall comply with the specified value given in table 11, column 3.

The sheath may fill the spaces between the cores, thus forming a filling, but it shall not adhere to the cores. The assembly of cores may be surrounded by a separator, which shall not adhere to the cores.

The assembly of circular cord shall have a practically circular cross-section.

7.3.5 Overall dimensions

The mean overall diameter of circular cords and the mean overall dimensions of flat cords shall be within the limits given in table 11, columns 4 and 5.

7.4 Tests

Compliance with the requirements of 7.3 shall be checked by inspection and by the tests given in table 12.

7.5 Guide to use

Maximum conductor temperature in normal use: 90 °C.

NOTE – Other guidelines are under consideration.

Table 11 – General data for type 60227 IEC 56

8 Heat-resistant ordinary PVC-sheathed cord for a maximum conductor temperature of 90 °C**8.1 Code designation**

6.227 IEC 57

8.2 Rated voltage

300/500 V

8.3 Construction**8.3.1 Conductor**

Number of conductors: 2, 3, 4 or 5.

The conductors shall comply with the requirements given in IEC 60228 for class 5 conductors.

8.3.2 Insulation

The insulation shall be polyvinyl chloride compound of type PVC/E applied around each conductor.

The insulation thickness shall comply with the specified value given in table 13, column 2.

The insulation resistance shall be not less than the value given in table 13, column 6.

8.3.3 Assembly of cores and fillers, if any

Circular cord: the cores and the fillers, if any, shall be twisted together.

Flat cord: the cores shall be laid parallel.

For circular cord having two cores, the space between the cores shall be filled either by separate fillers or by the sheath filling the interstices.

Any filler shall not adhere to the cores.

8.3.4 Sheath

The sheath shall be polyvinyl chloride compound of type PVC/ST10 applied around the cores.

The sheath thickness shall comply with the specified value given in table 13, column 3.

The sheath may fill the spaces between the cores, thus forming a filling, but it shall not adhere to the cores.

The assembly of cores may be surrounded by a separator, which shall not adhere to the cores.

The assembly of circular cords shall have a practically circular cross-section.

8.3.5 Overall dimensions

The mean overall diameter of circular cords and the mean overall dimensions of flat cords shall be within the limits given in table 13, columns 4 and 5.

Table 13 – General data for type 60227 IEC 57

1 Number and nominal cross- sectional area of conductors mm ²	2 Insulation thickness mm	3 Sheath thickness mm	4 Mean overall dimensions mm	5 Lower limit mm	6 Upper limit mm	Minimum insulation resistance at 90 °C MΩ·km	
Specified value	Specified value	Specified value	Mean overall dimensions		Lower limit mm	Upper limit mm	Minimum insulation resistance at 90 °C MΩ·km
			Lower limit	Upper limit			
2 × 0,75	0,6	0,8	5,7 or 3,7 × 6,0	7,2 or 4,5 × 7,2			0,011
2 × 1	0,6	0,8	5,9	7,5			0,010
2 × 1,5	0,7	0,8	6,8	8,6			0,010
2 × 2,5	0,8	1,0	8,4	10,6			0,009
3 × 0,75	0,6	0,8	6,0	7,6			0,011
3 × 1	0,6	0,8	6,3	8,0			0,010
3 × 1,5	0,7	0,9	7,4	9,4			0,010
3 × 2,5	0,8	1,1	9,2	11,4			0,009
4 × 0,75	0,6	0,8	6,6	8,3			0,011
4 × 1	0,6	0,9	7,1	9,0			0,010
4 × 1,5	0,7	1,0	8,4	10,5			0,010
4 × 2,5	0,8	1,1	10,1	12,5			0,009
5 × 0,75	0,6	0,9	7,4	9,3			0,011
5 × 1	0,6	0,9	7,8	9,8			0,010
5 × 1,5	0,7	1,1	9,3	11,6			0,010
5 × 2,5	0,8	1,2	11,2	13,9			0,009

NOTE – The mean overall dimensions have been calculated in accordance with IEC 60719.

8.4 Tests

Compliance with the requirements of 8.3 shall be checked by inspection and by the tests given in table 14.

8.5 Guide to use

Maximum conductor temperature in normal use: 90 °C.

NOTE – Other guidelines are under consideration.

Table 14 – Tests for type 60227 IEC 57

1	2	3	4	5
Reference No.	Tests	Category of test	Test methods described in: IEC standard	clause/ subclause
1	Electrical tests			
1.1	Resistance of conductors	T,S	60227-2	2.1
1.2	Voltage test on completed cable at 2 000 V	T,S	60227-2	2.2
1.3	Voltage test on cores according to specified insulation thickness:			
1.3.1	– at 1 500 V up to and including 0,6 mm	T	60227-2	2.3
1.3.2	– at 2 000 V exceeding 0,6 mm	T	60227-2	2.3
1.4	Insulation resistance at 90 °C	T	60227-2	2.4
2	Provisions covering constructional and dimensional characteristics			
2.1	Checking of compliance with constructional provisions	T,S	60227-1	Inspection and manual tests
2.2	Measurement of thickness of insulation	T,S	60227-2	1.9
2.3	Measurement of thickness of sheath	T,S	60227-2	1.10
2.4	Measurement of overall dimensions			
2.4.1	Mean value	T,S	60227-2	1.11
2.4.2	Ovality	T,S	60227-2	1.11
3	Mechanical properties of insulation			
3.1	Tensile test before ageing	T	60811-1-1	9.1
3.2	Tensile test after ageing	T	60811-1-2	8.1.3.1
3.3	Loss of mass test	T	60811-3-2	8.1
3.4	Compatibility test ¹⁾	T	60811-1-2	8.1.4
4	Mechanical properties of sheath			
4.1	Tensile test before ageing	T	60811-1-1	9.2
4.2	Tensile test after ageing	T	60811-1-2	8.1.3.1
4.3	Loss of mass test	T	60811-3-2	8.2
5	Pressure test at high temperature			
5.1	Insulation	T	60811-3-1	8.1
5.2	Sheath	T	60811-3-1	8.2
6	Tests at low temperature			
6.1	Bending test for insulation	T	60811-1-4	8.1
6.2	Bending test for sheath ²⁾	T	60811-1-4	8.2
6.3	Elongation test for sheath ³⁾	T	60811-1-4	8.4
6.4	Impact test	T	60811-1-4	8.5
7	Heat shock test			
7.1	Insulation	T	60811-3-1	9.1
7.2	Sheath	T	60811-3-1	9.2
8	Thermal stability			
8.1	Insulation	T	60811-3-2	9
8.2	Sheath	T	60811-3-2	9
9	Mechanical strength of complete cable			
9.1	Flexing test	T	60227-2	3.1
10	Test of flame retardance	T	60332-1	–

¹⁾ See 5.3.1 of IEC 60227-1.²⁾ Only applicable to cables having mean overall diameters up to and including 12,5 mm.³⁾ Only applicable if the mean overall diameter of the cable exceeds 12,5 mm.
