

SEMICONDUCTOR

LLDB3/LLDC34/LLDB4/LLDB6

SILICON BIDIRECTIONAL DIAC

FEATURES

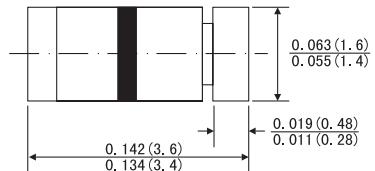

The three layer, two terminal, axial lead, hermetically sealed diacs are designed specifically for triggering thyristors. They demonstrate low breakover current at breakover voltage as they withstand peak pulse current. The breakover symmetry is within three volts(LLDB3,LLDC34,LLDB4) or four volts(LLDB6). These diacs are intended for use in thyristor phase control, circuits for lamp dimming, universal motor speed control, and heat control.

JF's DB3/DC34/DB4/DB6 are bi-directional triggered diode designed to operate in conjunction with Triacs and SCR's

MECHANICAL DATA

- Case: Mini-MELF glass case(SOD-80)
- Weight: Approx. 0.05 gram
