

BOOST CONVERT CONTROL IC**GENERAL DESCRIPTION**

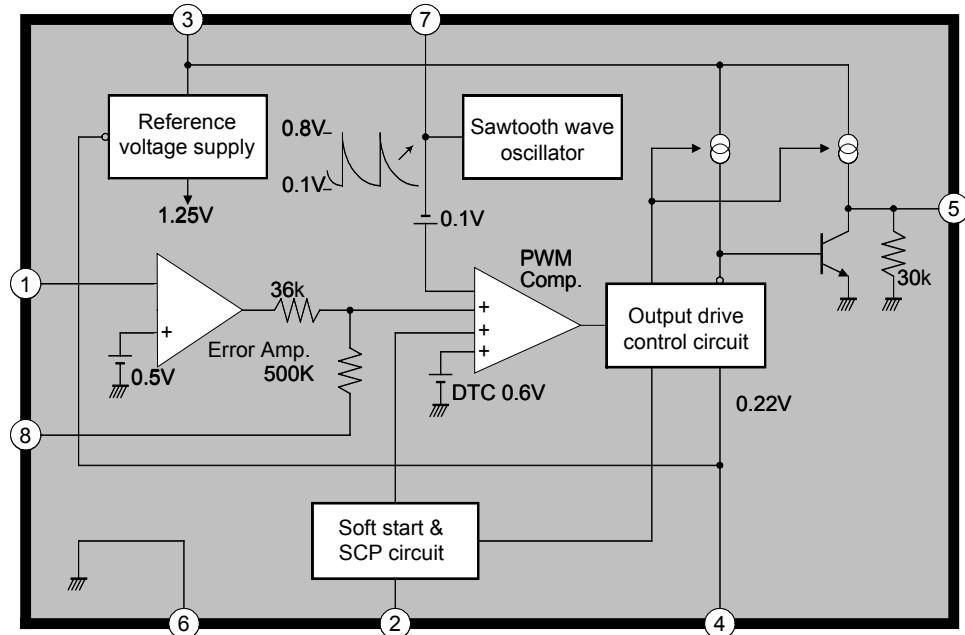

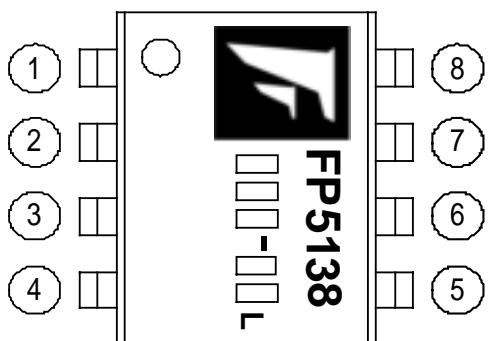

The **FP5138B** is a boost topology switching regulator control IC for battery-used applications field. The **FP5138B** includes a totem-pole single output stage for driving NPN transistor or N-MOS, high precision reference (0.5V) for comparing output voltage with feedback amplifier, an internal dead-time control for controlling the minimum duty cycle, programmable soft start with short circuit protection function and logic level control for operating mode or standby mode.

FEATURES

- Wide supply voltage operating range: 1.8 to 15V
- Reference voltage precision: 2%
- Low current consumption: Operation Mode 5.5mA
Standby-by Mode 1 μ A
- High speed oscillator frequency: 1MHz max.
- Programmable Soft Start function (SS)
- Short Circuit Protection function(SCP)
- Totem-pole output with adjustable on/off current
(for NPN transistors or n-channel MOSFET)
- Logic level control stand-by mode function
- Package: SOP8/TSSOP8/MSOP8

**SOP8****TSSOP8****MSOP8****TYPICAL APPLICATION**

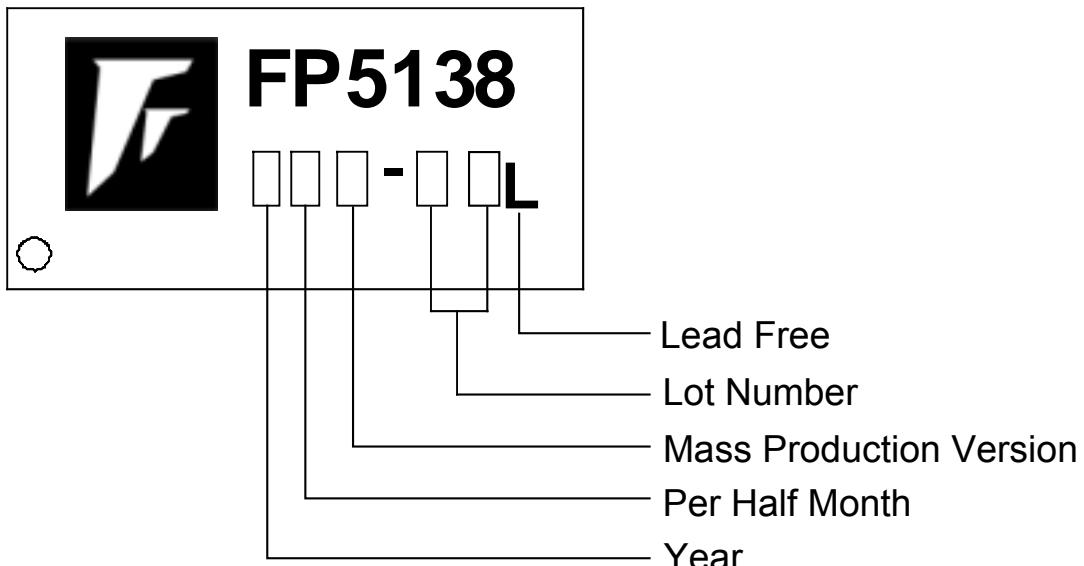

- Digital Camera
- PDA
- Portable Equipment

DETAILED DESCRIPTION

Voltage reference

A 1.25V regulator operating from VCC is used to power the internal circuitry of the **FP5138B**. An internal resistive divider provides 0.5V reference for the error amplifier, Soft-start (typ. 0.9V) and SCP (typ. 0.8V) circuits.

Error amplifier

The error amplifier compares a sample of the dc-dc converter output voltage to the 0.5V reference and generates an error signal for the PWM comparator. Output voltage of dc-dc converter is setting with the resistor divider using the following expression (see fig12):

$$V_{out} = \left(1 + \frac{R1}{R2}\right) * 0.5$$

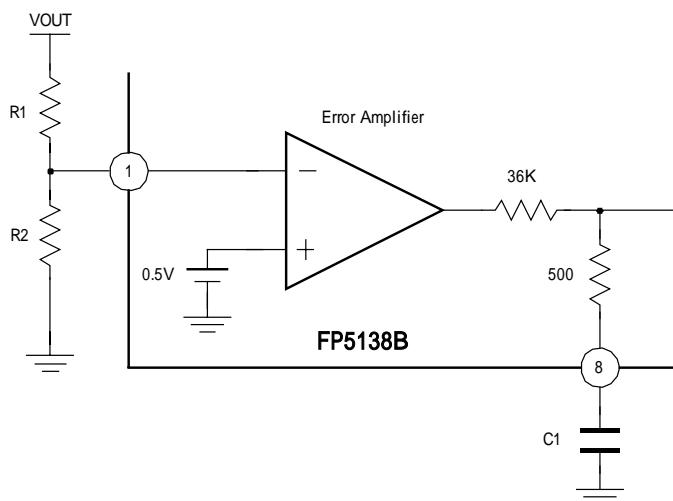

Figure 12. Error Amplifier with Feedback resistance divider

Oscillator

The oscillator frequency can be set between 20KHz and 500KHz by connecting a resistor and a capacitor at OSC pin of **FP5138B** to ground. The oscillator frequency can be determined by using the graph shown in Figure 9.

The oscillator output is a sawtooth wave with a minimum value of approximately 0.1V and a maximum value of approximately 0.8V. The PWM comparator compares the oscillator voltage with error amplifier output voltage; internal DTC voltage (typ. 0.6V) and soft start setting voltage. When the sawtooth wave voltage is low than above three-output voltage, the output of **FP5138B** is high (Turn on NPN transistor or NMOS).

Under voltage lockout (UVLO)

The under voltage lockout circuits turn the output off and whenever the supply voltage drops too low (approximately 0.9V at 25°C) for proper operation. A hysteresis voltage of 200mV eliminates false triggering on noise and chattering.

Soft Start/ Short-circuit protection (S.S. / S.C.P.)

The soft start is functional after power on, and the interval of soft start time is determined by a capacitor connected to SCP pin (pin 2). When soft start function finished, the internal soft start voltage is setting high, but external SCP pin is setting low in order to change to short circuit detection / protection function.

The time of soft start is following expression:

$$T_{ss} = 0.35 * C [\mu F]$$

The short circuit protection is functional due to a heavy loading drop and output of error amplifier (COMP pin) is maintain a V_{POS} (typ. 0.9V), the capacitor is charged until SCP threshold voltage (typ. 0.8V), then **FP5138B** output is disable (internal pull-low) and the capacitor is discharged to low.

The time of short circuit protection is following expression:

$$T_{scp} = 0.8 * C [\mu F]$$

Output transistor

The **FP5138B** has a totem-pole transistor with a 40mA source/sink current rating to drive an external NPN transistor or NMOS directly. The driving current capability depends on a resistor R that is connected to BR/CTL pin (Pin4) of **FP5138B**. (see fig. 14)

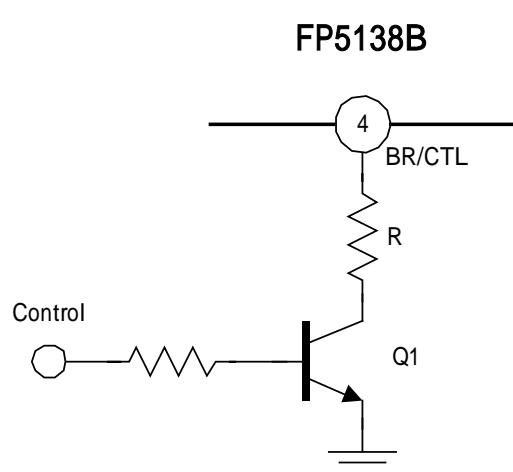

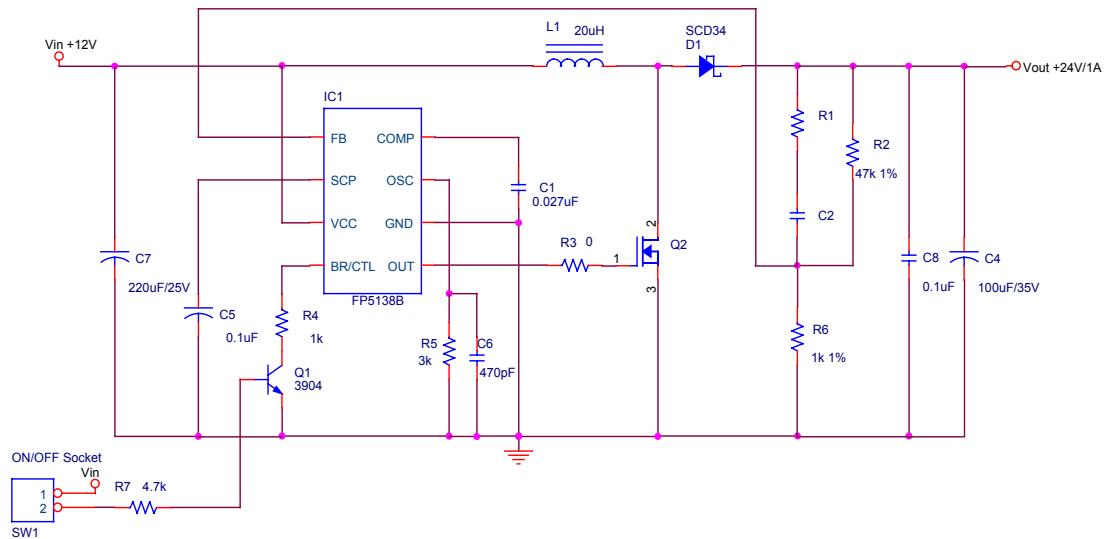

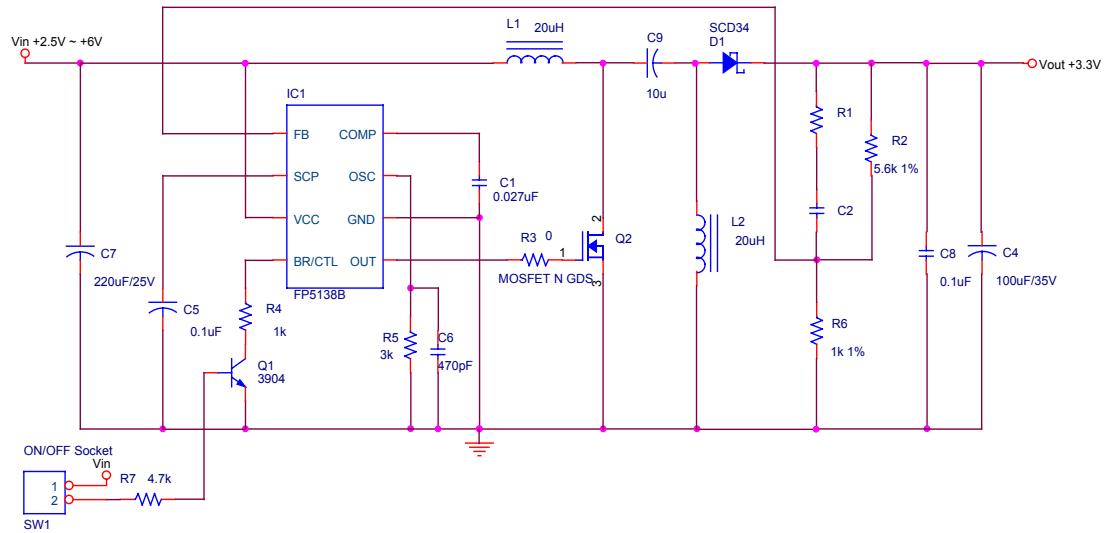

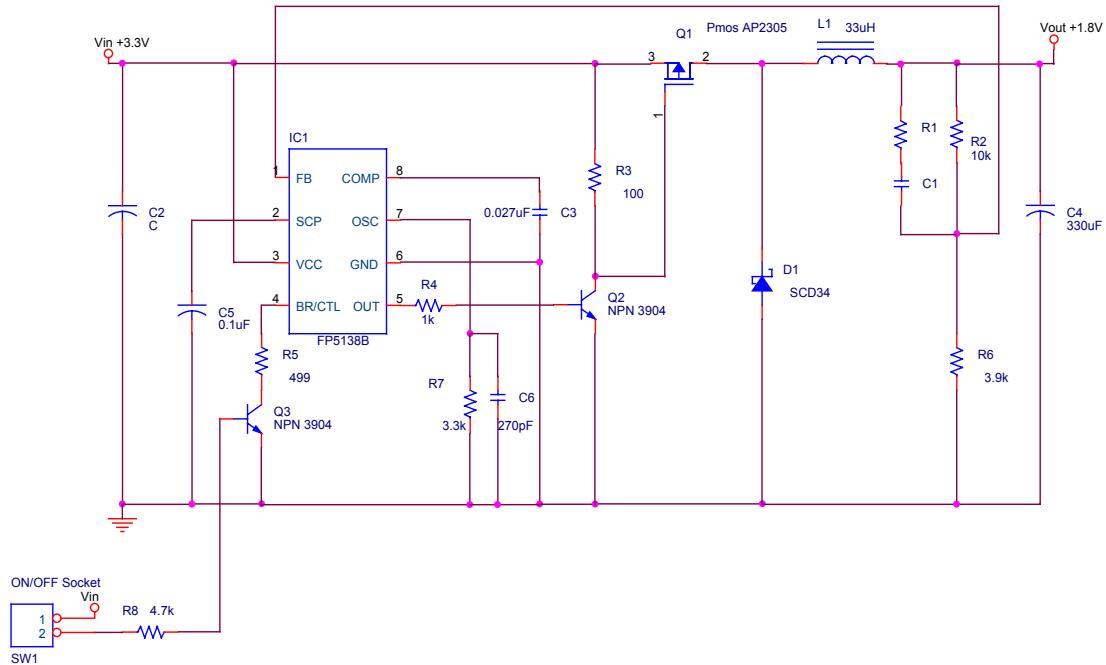

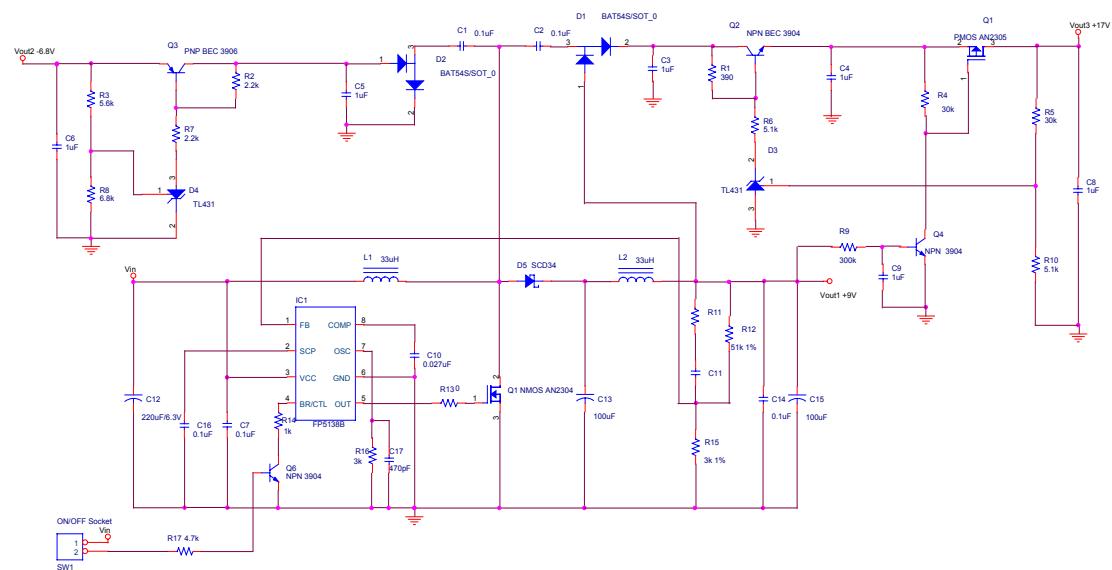

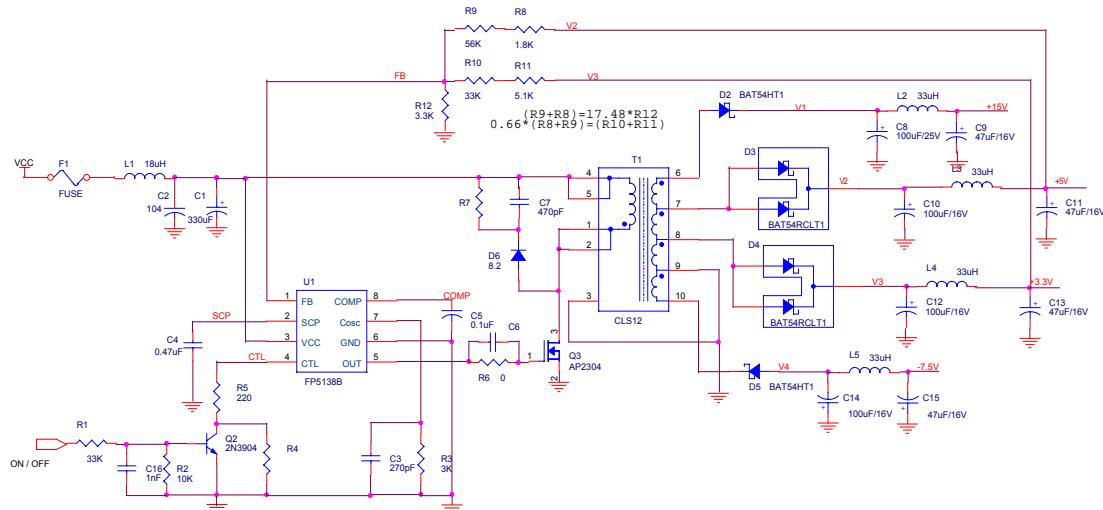

Figure 13. Output transistor driving control circuit

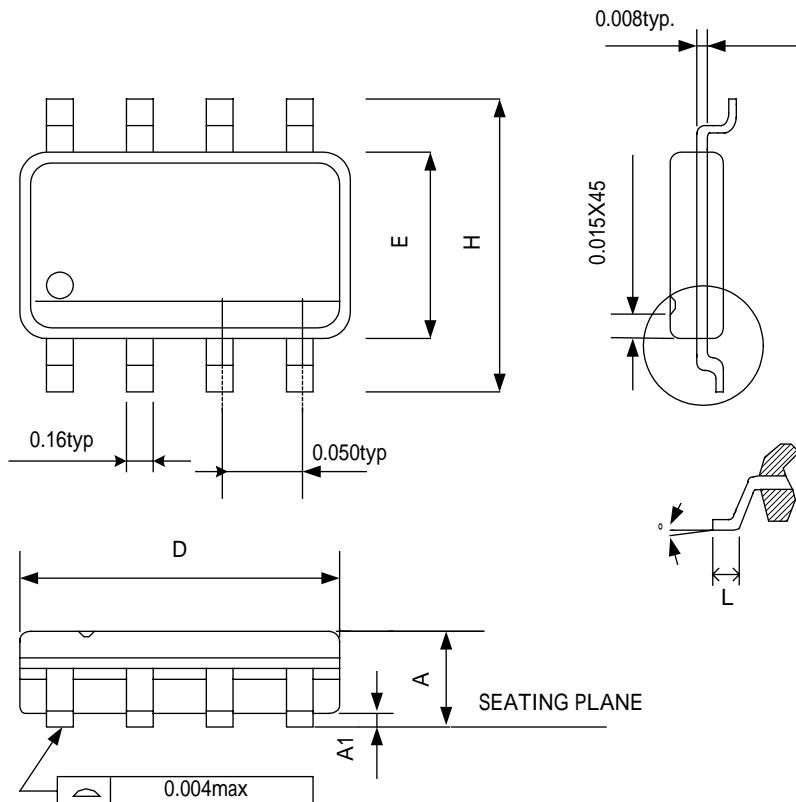

BR/CTL pin can also use to control the output of **FP5138B** for disable or enable function of system.

Control Pin	Q1	BR/CTL Pin	Output Transistor Function	Mode
Low	Off	Open	Disable	Stand-by
High	On	Bias Current	Enable	Operation
