## LM432

## Dual Op Amp with On-Chip Fixed 2.5V Reference

## General Description

The LM432 integrates two operational amplifiers and one 2.5 V reference. The reference is based on the LMV431 adjustable shunt regulator with the output voltage adjusted to a fixed 2.5 V . The Op Amps are similar to the LM358 with a common-mode input range that includes ground. Integrating the reference and Op Amps creates a solution for low cost charging applications.

Note 1: Absolute Maximum Ratings indicate limits beyond which damage to the device may occur.
Note 2: Operating Rating indicate conditions for which the device is functional. These rating do not guarantee specific performance limits. For guaranteed specifications and test conditions, see the Electrical Characteristics. The guaranteed specifications apply only for the test conditions listed. Some performance characteristics may degrade when the device is not operated under the listed test conditions.
Note 3: All voltages are measured with respect to $\mathrm{GND}=0 \mathrm{~V}_{\mathrm{DC}}$, unless otherwise specified.
Note 4: Typicals represent the most likely parametic norm.
Note 5: Guaranteed to National's Average Outgoing Quality Level (AOQL).
Note 6: Reference voltage deviation, $\mathrm{V}_{\mathrm{ZDEV}}$, is defined as the maximum variation of the reference input voltage over the full temperature range.
Note 7: The Dynamic Output Impendance, $r_{\mathrm{z}}$, is defined as $\mathrm{r}_{\mathrm{z}}=\Delta \mathrm{V}_{\mathrm{Z}} / \Delta \mathrm{I}_{\mathrm{z}}$

Note 8: Minimum value of operating voltage is for Amplifier B only.
Note 9: Typical Temperature drift $\Delta \mathrm{V} / \Delta \mathrm{T}=12.8 \mathrm{ppm} /{ }^{\circ} \mathrm{C}$
