

The table below is our order spec. You'd better inform the supplier two columns:

- 1) Measurement Current: That means inductor should be measured at 5A bias current.
- 2) Saturate Current: Inductor should never be saturate, at the stated current.

电感值	测量电流	测量频率	电感值误差	电流有效值	饱和电流值	线圈电阻值	高温下电感值误差
800uH	5.0 ADC	1 KHz	5%	2.5 ADC	16 ADC	< 0.3 Ohm	20%
10.5 mH	5.0 ADC	1 KHz	5%	3.5 ADC	6 ADC	< 0.9 Ohm	20%

Any questions, never hesitate to let us know.
