### 2.0 Description

The iW1692 is a high performance AC/DC power supply controller which uses digital control technology to build peak current mode PWM flyback power supplies. The device provides high efficiency along with a number of key built-in protection features while minimizing the external component count and bill of material cost. The iW1692 removes the need for secondary feedback circuitry while achieving excellent line and load regulation. It also eliminates the need for loop compensation components while maintaining stability over all operating conditions. Pulse-by-pulse waveform analysis allows for a loop response that is much faster than traditional solutions, resulting in improved dynamic load response. The built-in power limit function enables optimized transformer design in universal off-line applications and allows for a wide input voltage range.

The low start-up power and PFM operation at light load ensure that the iW1692 is ideal for applications targeting the newest regulatory standards for standby power.

### 3.0 Applications

- Low power AC/DC adapter/chargers for cell phones, PDAs, digital still cameras
- Standby supplies for televisions, DVDs, set-top boxes and other consumer electronics
