

SP433

Constant Voltage and Constant Current Controller

DESCRIPTION

The SP433 is high-voltage four-terminal adjustable voltage references, with over current protection feature. The SP433 is a one chip solution to a 2.5V precision voltage reference and constant current output in the application of secondary feedback control of power supply, DC/DC converter, adaptor and charger. SP433 is idea for low cost switching power supply application.

APPLICATIONS

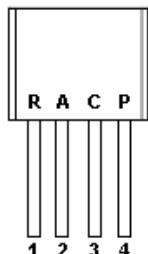

- Battery Charger
- Battery Power Equipment
- Linear Regulators
- Switch Power Supply
- Cellular Phone
- Digital Cameras
- Computer Disk Drivers
- Instrumentation

FEATURES

- Voltage Reference Accuracy of 0.5% & 1.0%
- Sink Current Capability from 1mA to 100mA
- Adjustable Output Voltage from VREF to 18V
- Low Output Noise
- Typical Output Dynamic Impedance Less Than 200mΩ
- Available in SOT-23-5L and TO-94 package
- Over Current Protection

APPLICATION NOTE

In the above application, SP433 is used to provide an accurate control of voltage and current. The voltage loop is controlled through an internal error amplifier, the resistor bridge R₁, R₂ and the photo-coupler. The relation between V_{out}, R₁, R₂ and V_{ref} is shown in:

$$V_{out} = V_{ref} \times (1 + R_1/R_2)$$

The current loop is controlled through an internal transistor, the sense resistor and the photo-coupler. The control equation is:

$$R_{sense} \times I\text{-limit} = 0.7V \text{ (typical)}$$

Where I-limit is the desired current limit. The selection of R_{sense} should consider the power loss through R_{sense}. It is calculated as:

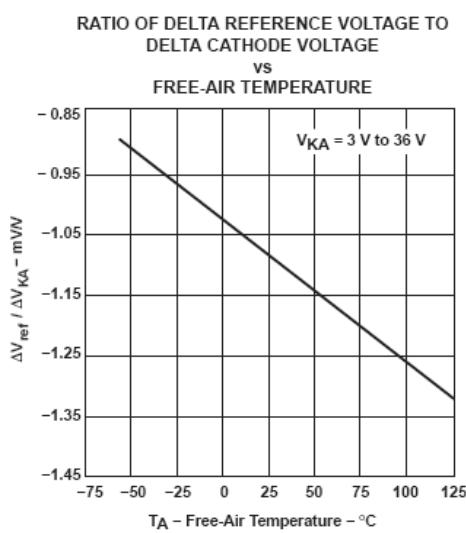

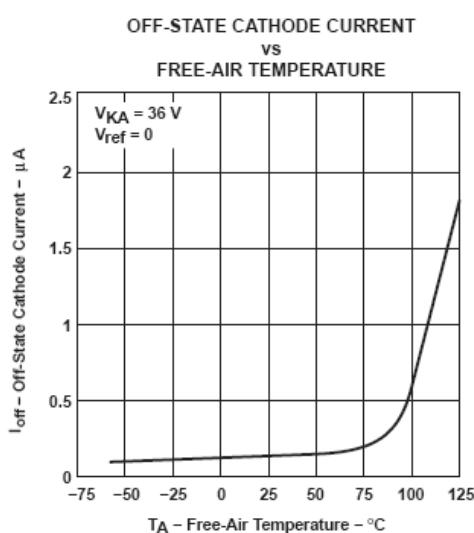

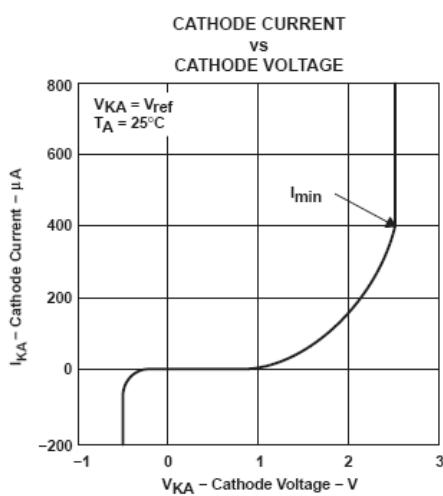

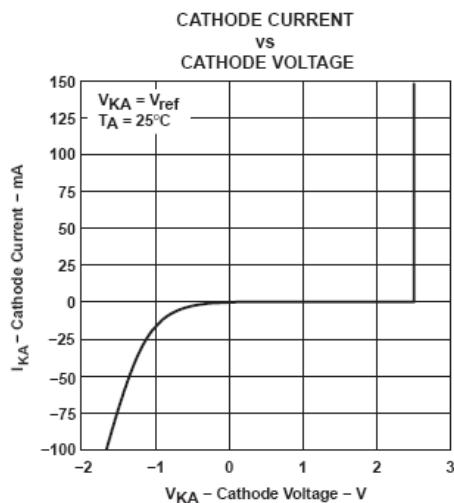

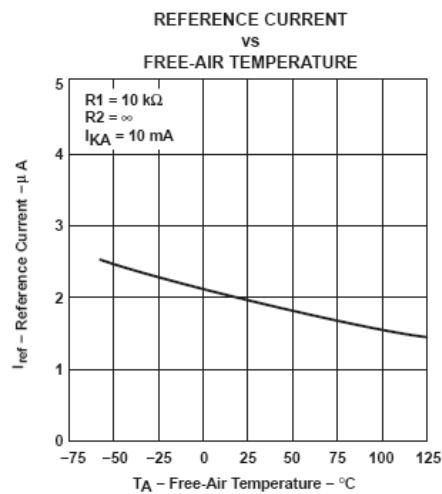

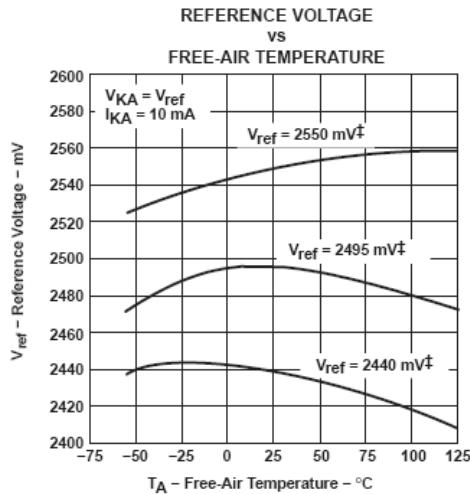

$$P\text{-limit} = 0.7 \times I\text{-limit}$$

Whether AC input is at High Line or Low Line, SP433 can provide the same current protection. It has the fuse function at the output.
