ELM91xxxxA CMOS PFM Step-up DC/DC converter and controller

■General description

ELM91xx1xA series is CMOS PFM control step-up DC-DC converter; ELM91xx3xA series is CMOS PFM control step-up DC-DC controller, which has large output current capacity by using an external FET switch. ELM91xxxxA series consists of reference voltage source, error amplifier, oscillation circuit, start-up circuit, PFM-control circuit, switching current limit circuit (ELM91xx1xA only), switching transistor (ELM91xx1xA only) and output voltage setting resistor. For external parts, coil, diode, MOSFET and capacitor are possible choices. The standard output voltages are 1.8V,3.0V,3.3V,5.0V; ELM91 series can also be designed as semi-custom IC within the range of 1.8V～5.5V by 0.1V step.

■Features

- Output voltage range : 1.8V～5.5V (by 0.1V)
- Low voltage operation : 0.9V (ELM91xx1xA : Iout=1mA)
- Low power operation : Typ.40μW (ELM91301xA : Typ.100kHz)
- High efficiency : 85% (ELM9130xxA : Vin=1.5V, Iout=10mA)
- Output current(e.g.) : 100mA (When Vin=1.5V, Vout=3.0V)
- Package : SOT-89, SOT-23, SC-70

■Application

- Constant voltage source for battery-operated devices
- Portable communication equipments and video recorders

■Maximum absolute ratings

Parameter	Symbol	Limit	Unit
Apply voltage to LX pin	Vlx	Vss-0.3～7.0	V
Apply voltage to VOUT pin	Vout	Vss-0.3～7.0	V
Output current of LX pin	Ilx	500	mA
Output current of EXT pin	Iext	20	mA
Power dissipation	Pd	300 (SOT-89)	mW
		200 (SOT-23)	
		150 (SC-70)	
Operationg temperature	Top	-40～+85	℃
Storage temperature	Tstg	-55～+125	℃

■External parts

To design DC/DC converters using ELM91xx1xA series, coil, diode, and capacitor are necessary. Except these external parts, switching transistor is also needed when using ELM91xx3xA. Please locate external parts to IC as close as possible, and lower the impedance of ground line. (Please refer to standard circuit)

1) Coil

When choosing choke coil, please select that whose core is not magnetically saturated, DC resistance is low, and which has sufficient margin for rated current.

The typical characteristics graphics of ELM91xx1xA series is done by following coil : SLF7045 (TDK)

The typical characteristics graphics of ELM91xx3xA series is done by following coil : SLF10145 (TDK)

2) Diode

When choosing diode, please select that whose forward voltage is small, switching speed is high and which has sufficient margin for rated current.

For ELM91 series, ELM recommends schottoky diodes.

3) Capacitor

When choosing capacitor, please select that which is generally used for smoothing power supply circuit, with comparatively large capacity and whose rated voltage is at least three times larger than rated output voltage of used ELM91 series.

For ELM91 series, ELM recommends Aluminum electrolytic or Tantalum capacitor.

Under different conditions, such as different input voltage, load current, etc. larger output voltage ripple may happen and thus result in intermittent switching. In order to the increase of ripple voltage in this case, please use the output capacitor whose capacity is comparatively large or ESR is small.

The output voltage of ELM91xx3xA may lower when the load current is large. To avoid this, please use the output capacitor whose capacity is comparatively large or ESR is small.

The following characteristics graphics are made with ELM91303xA, when Vin=1.5V. (Cin=100μF(Ta), 33μH)
