AMC7169

500mA LED PROTECTOR

DESCRIPTION

The AMC7169 is a two terminal LED protector with low dropout voltage rated for 500mA bypass current. Low operation current at monitoring mode and high bypass current capability at triggered mode. Build-in reverse diode for bypass reversed supply voltage.

The AMC7169 is designed for parallel connection with power LED. It bypasses LED driving current when LED at open circuit condition. It also bypasses LED driving current at reverse connected driving current to LED.

ABSOLUTE MAXIMUM RATINGS (Note)

Input Voltage, V_{AC}	40V
Maximum Operating Junction Temperature, T_J	150°C
Storage Temperature Range	-65°C to 150°C
Lead Temperature (soldering, 10 seconds)	260°C

Note: Exceeding these ratings could cause damage to the device. All voltages are with respect to Ground. Currents are positive into, negative out of the specified terminal.

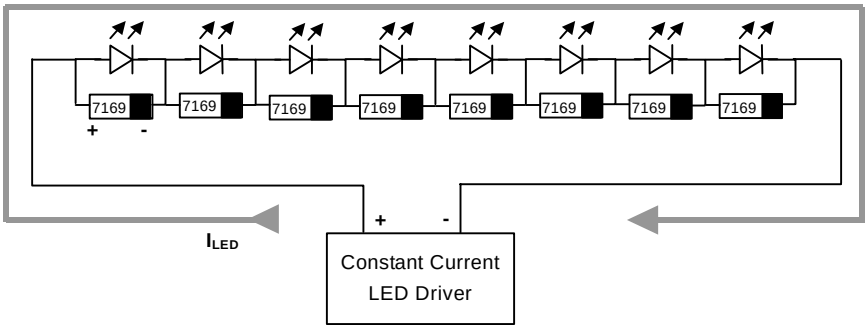
APPLICATION INFORMATION

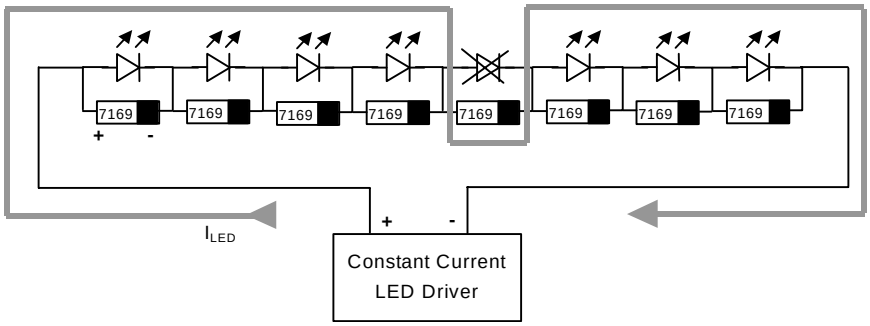
Monitoring Mode:

The forward voltage drop (Vf) of all LEDs should be less than 4V, which is lower than AMC7169 trigger voltage 5.0V. All AMC7169 at monitoring mode would only sink ~uA current from the system.



Triggered Mode:

Any LED may become open circuit because of LED damage or wiring problem. When it happens, the voltage drop across adjacent AMC7169 starts to increase, and then AMC7169 will be trigged when the voltage drop reaches 5V. The dropout voltage on AMC7169 will be around 1V and the LED current I_{LED} will be bypassed to next LED. All LEDs will work well except the abnormal LED bypassed.



Reverse Mode:

When the LED string was reversed connected to the driver, the AMC7169 build-in reverse protection diode was turned-on to bypass the current. Such that the reverse voltage on LEDs was reduced to prevent LED damage.
