6. Turn On Delay Time

Turn on delay time will be less than 3 seconds at full load. Turn on delay time is measured as the delay between input voltage being applied at 0° phase angle and when the outputs arrive within 10% of their operating value. Turn on delay time is measured using an input voltage of 90VAC(rms) and input frequency of 60Hz.

Test Conditions:

Input: 90Vac(60Hz)

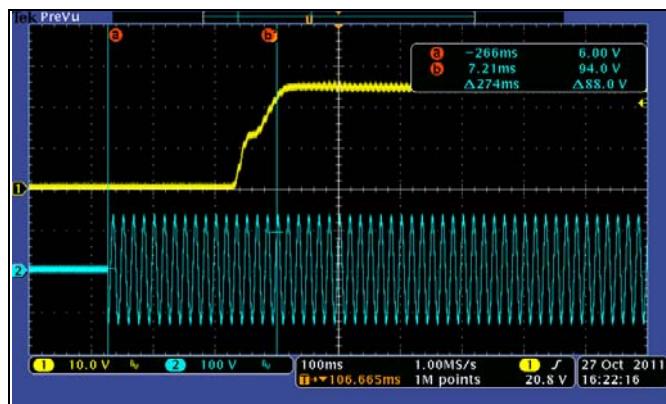

Output: CV mode (24V)

Ambient Temperature : 25°C

Test Result: PASS

7. Output Short Protection

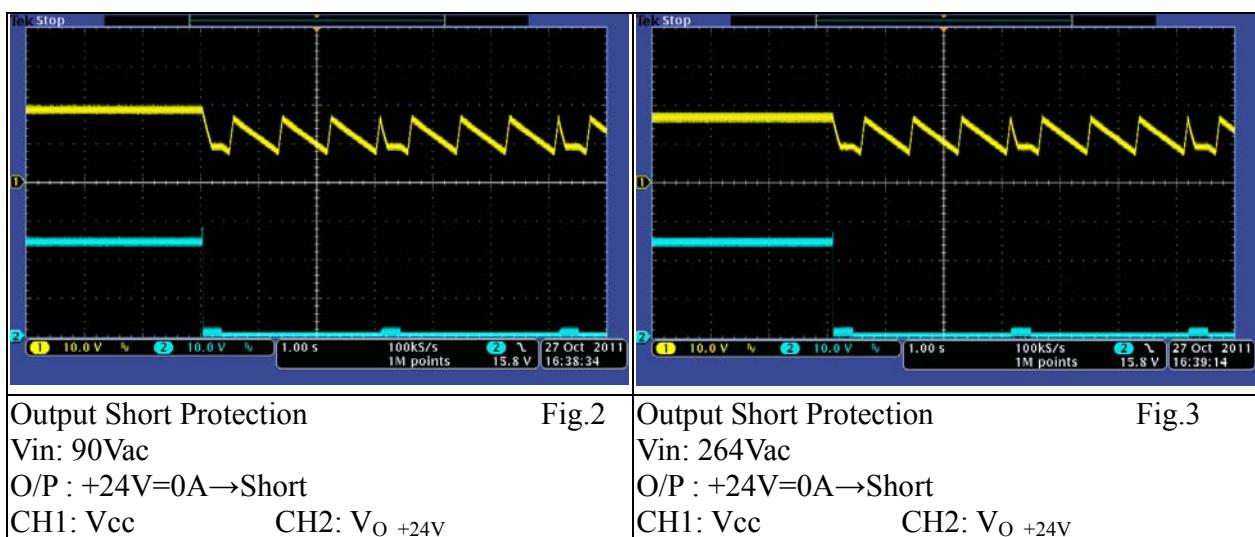

The supply shall be designed with appropriate output short circuit protection. This protection shall be activated in the event of a short or long-term condition happened. The primary shall limit the total power without inflicting any damage to any internal supply components and shall be reversible pending removal of the cause of the condition and without any user intervention.

Test Condition:

Input: 90Vac/264Vac (60Hz)

Ambient Temperature: 25°C
