## **Equipment List**

Techtronix, Oscilloscope, TDS640A  
Fluke 45 Dual Display Multimeter  
Electronic Load, TDI RBL 488 50-150-800  
Voltage Source: HP 6051

## Module Setup

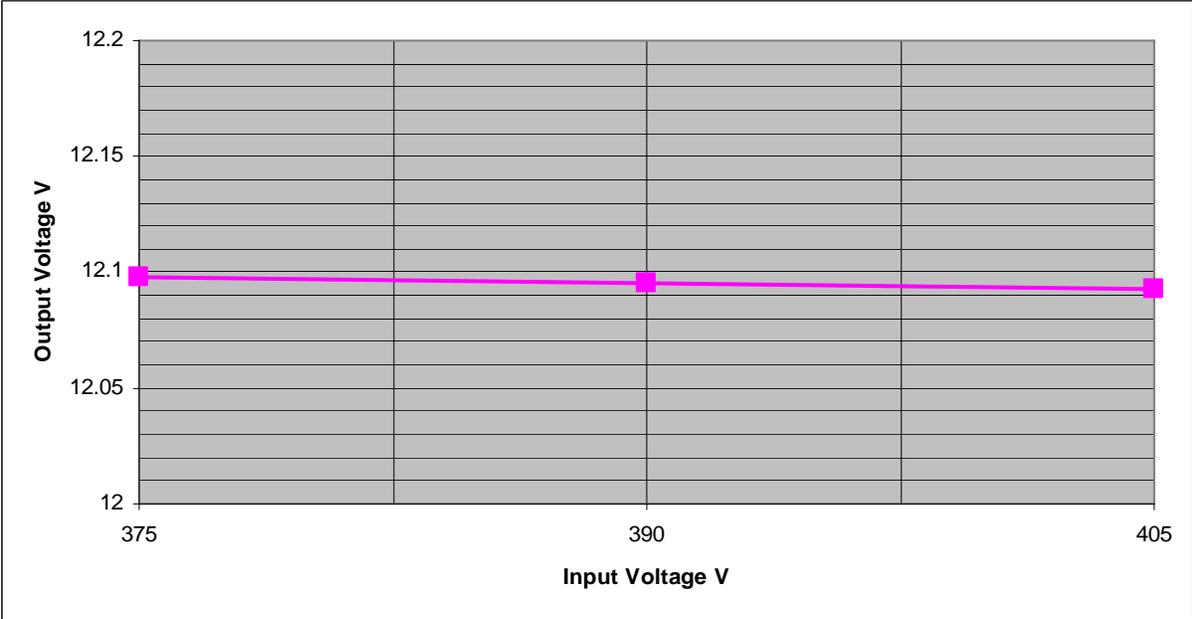

1. none

# Switching Frequency Variation with Load

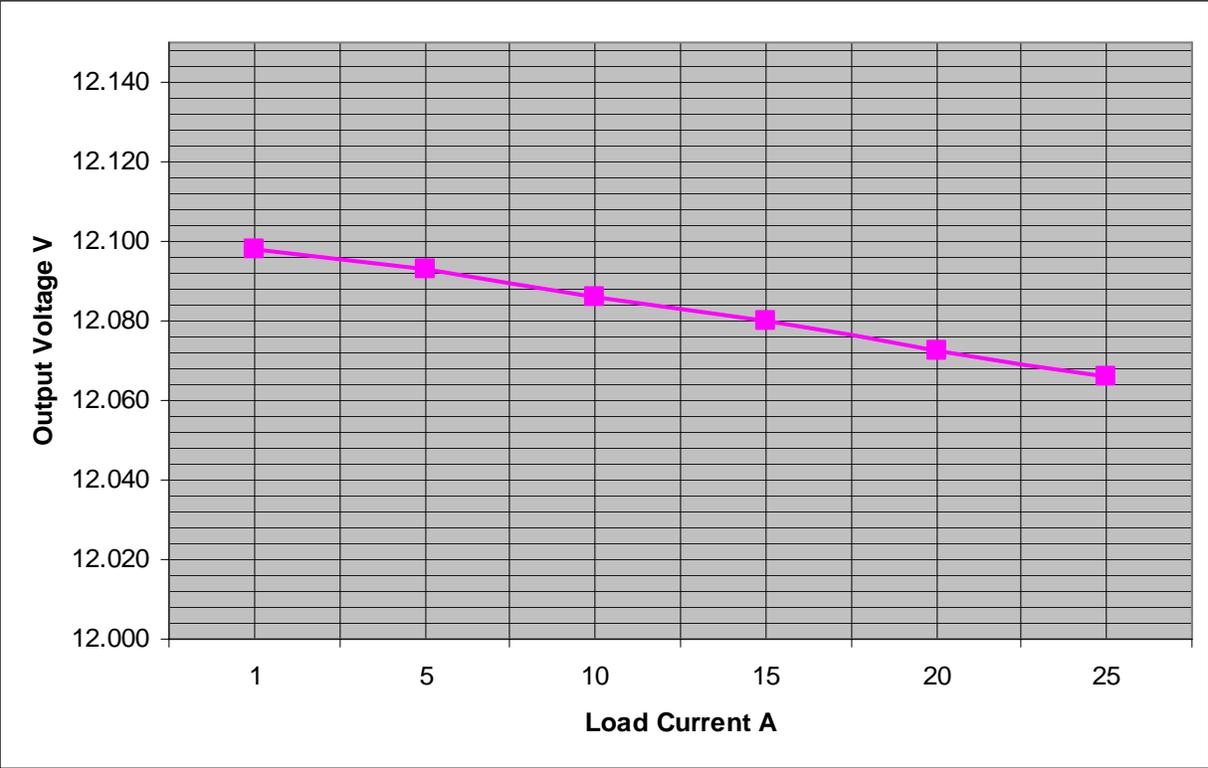

Vin = 390Vdc

# Line Regulation

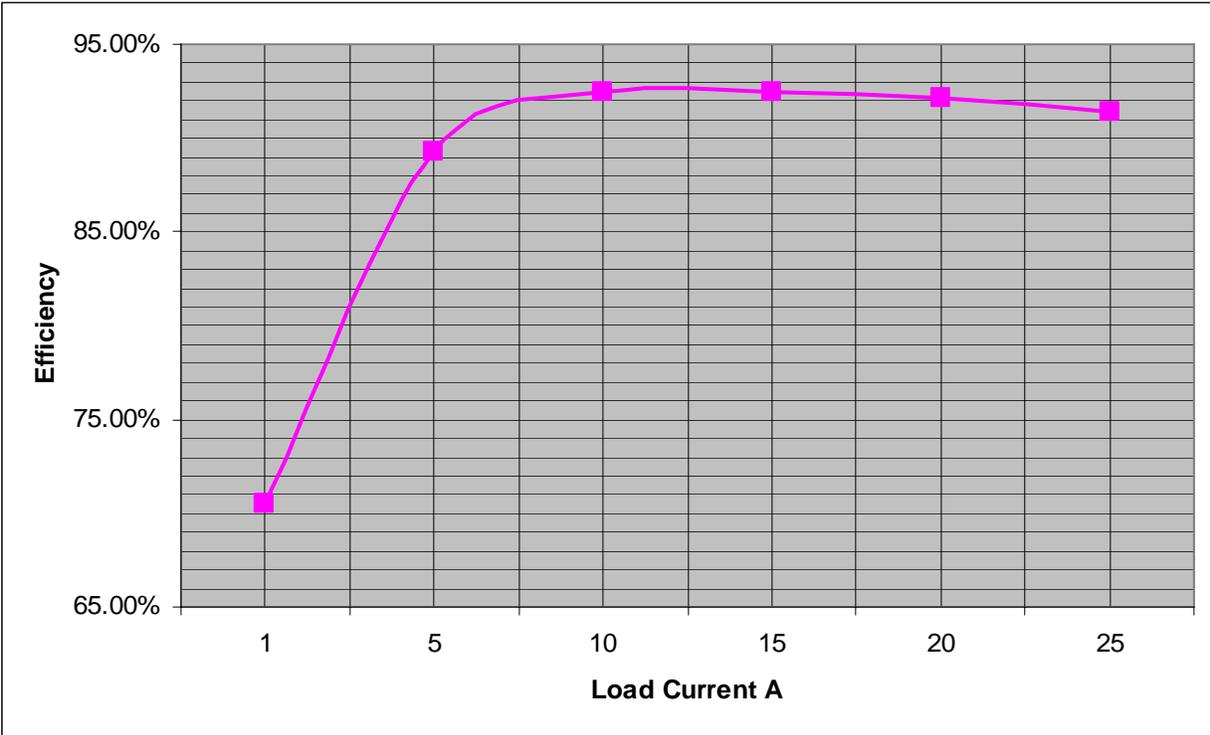

$I_o = 1A$

# Load Regulation

$V_{in} = 390V_{dc}$

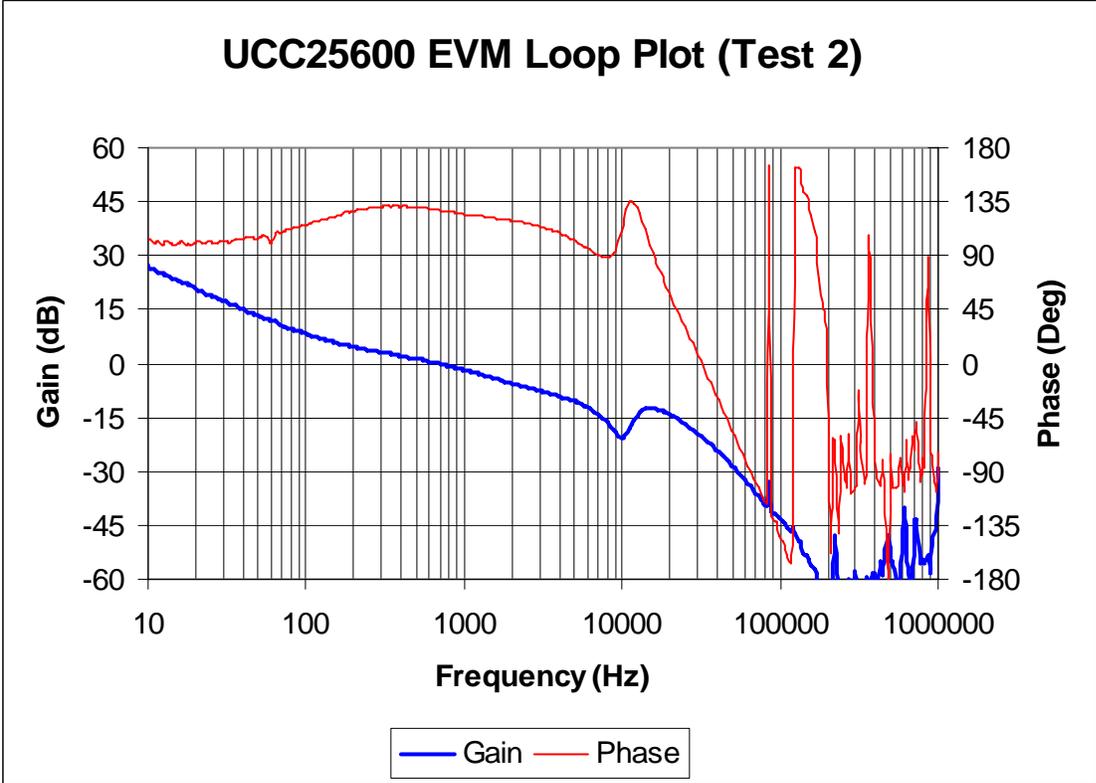

# Efficiency

Vin = 390Vdc

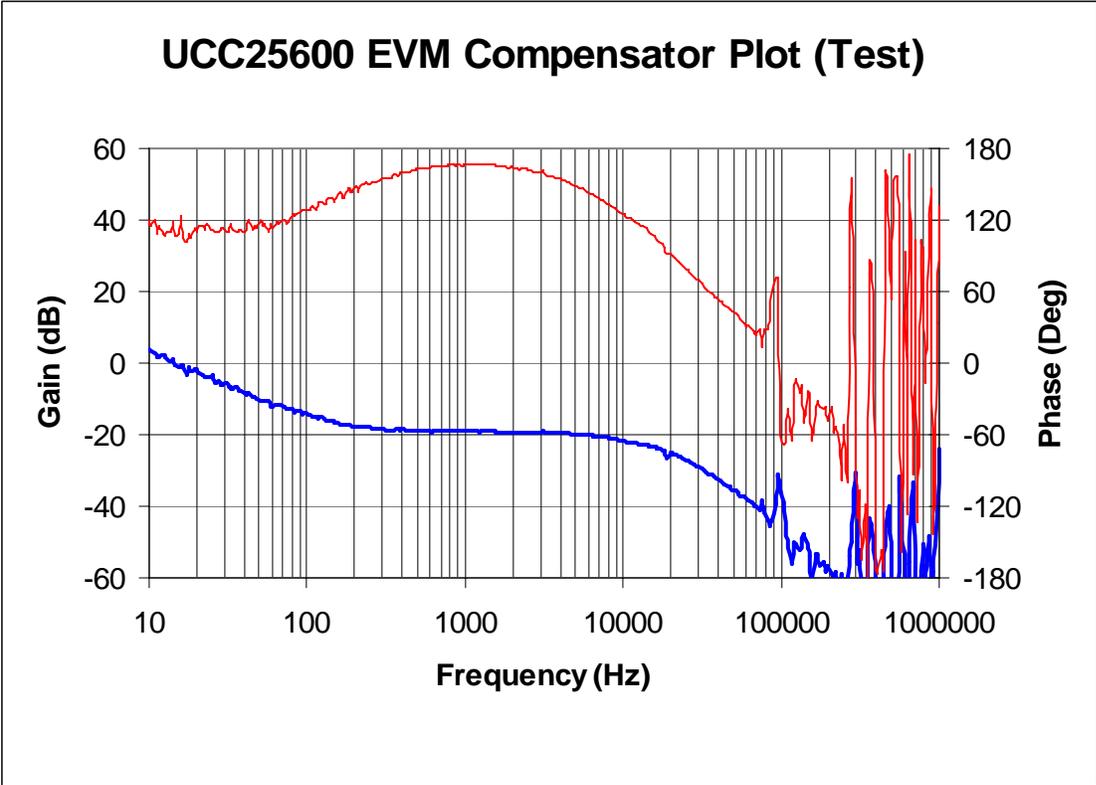

# Bode Plots

## Full System

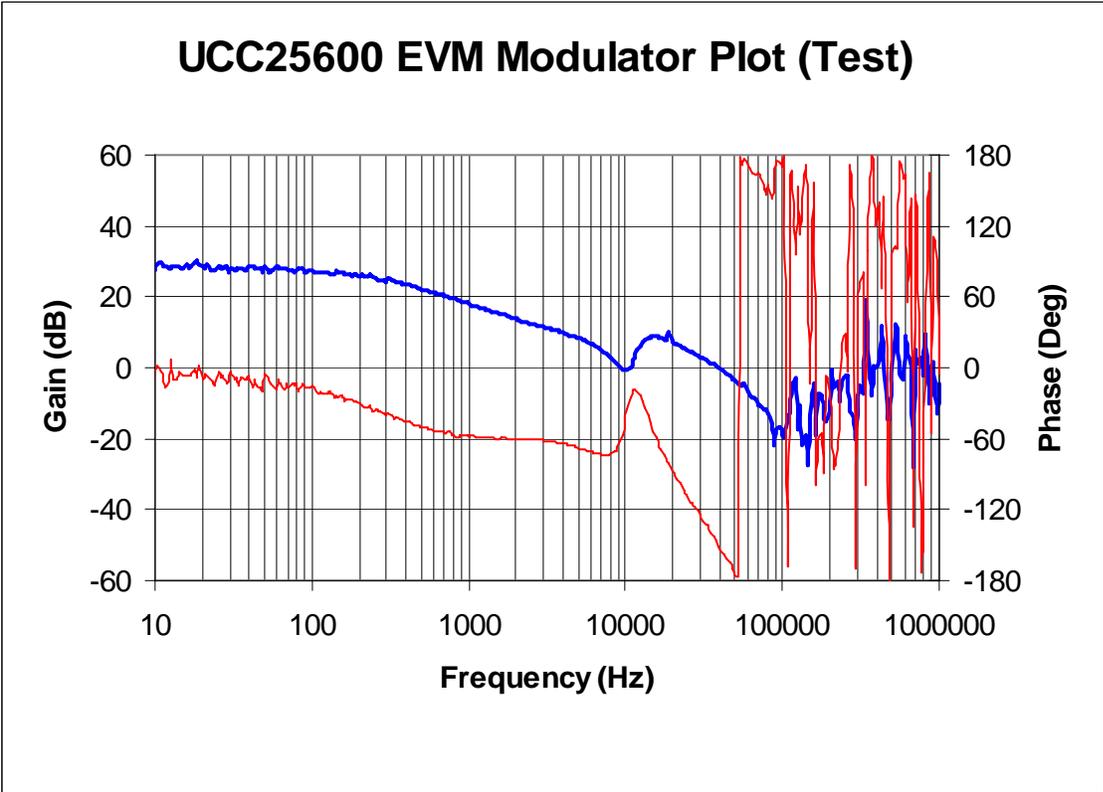

Note:  $V_{in} = 390V$ ,  $I_o = 1A$

# Compensator

Note:  $V_{in} = 390V$ ,  $I_o = 1A$

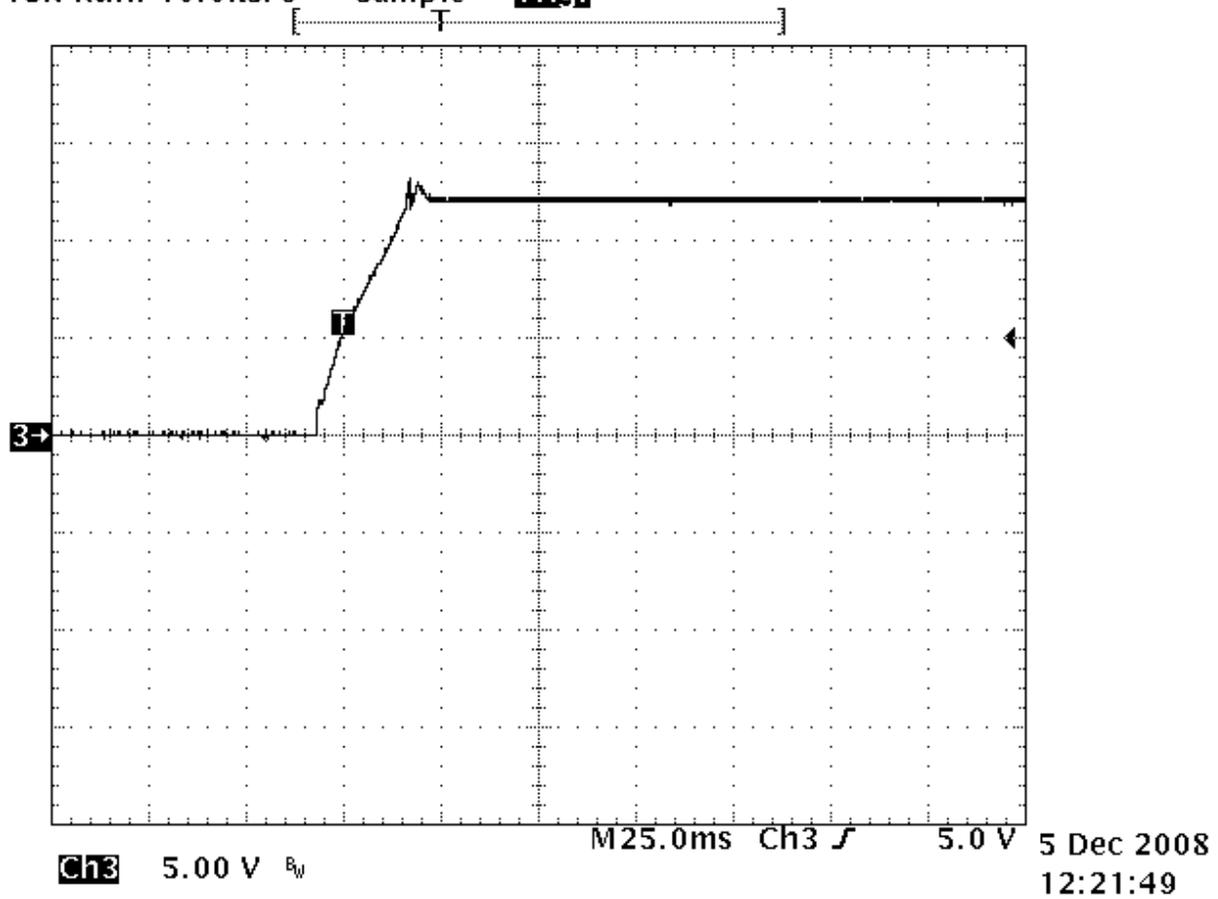

**Modulator**

Note:  $V_{in} = 390V$ ,  $I_o = 1A$

# Output Voltage Turn On

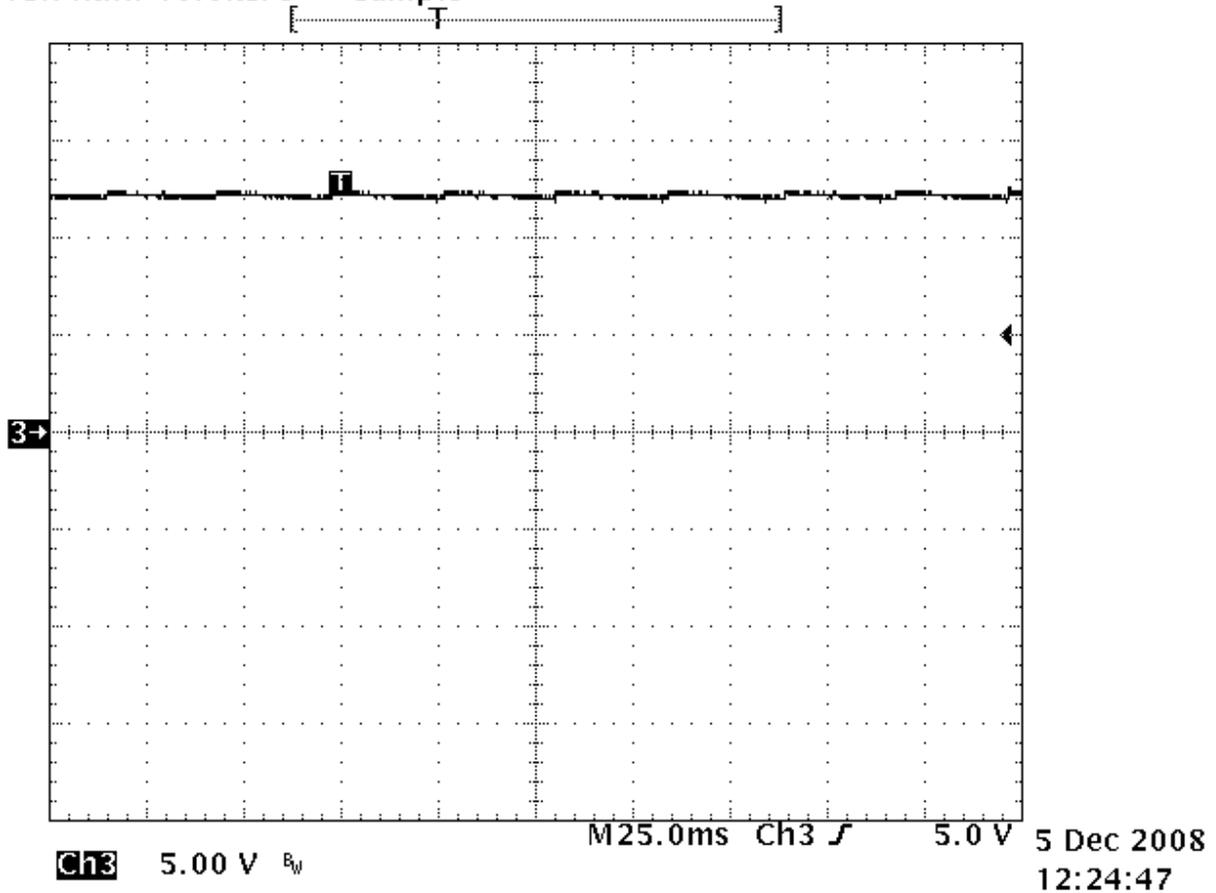

Tek Run: 10.0kS/s Sample **1192**

Note:  $V_{in} = 390V$ ,  $I_o = 25A$

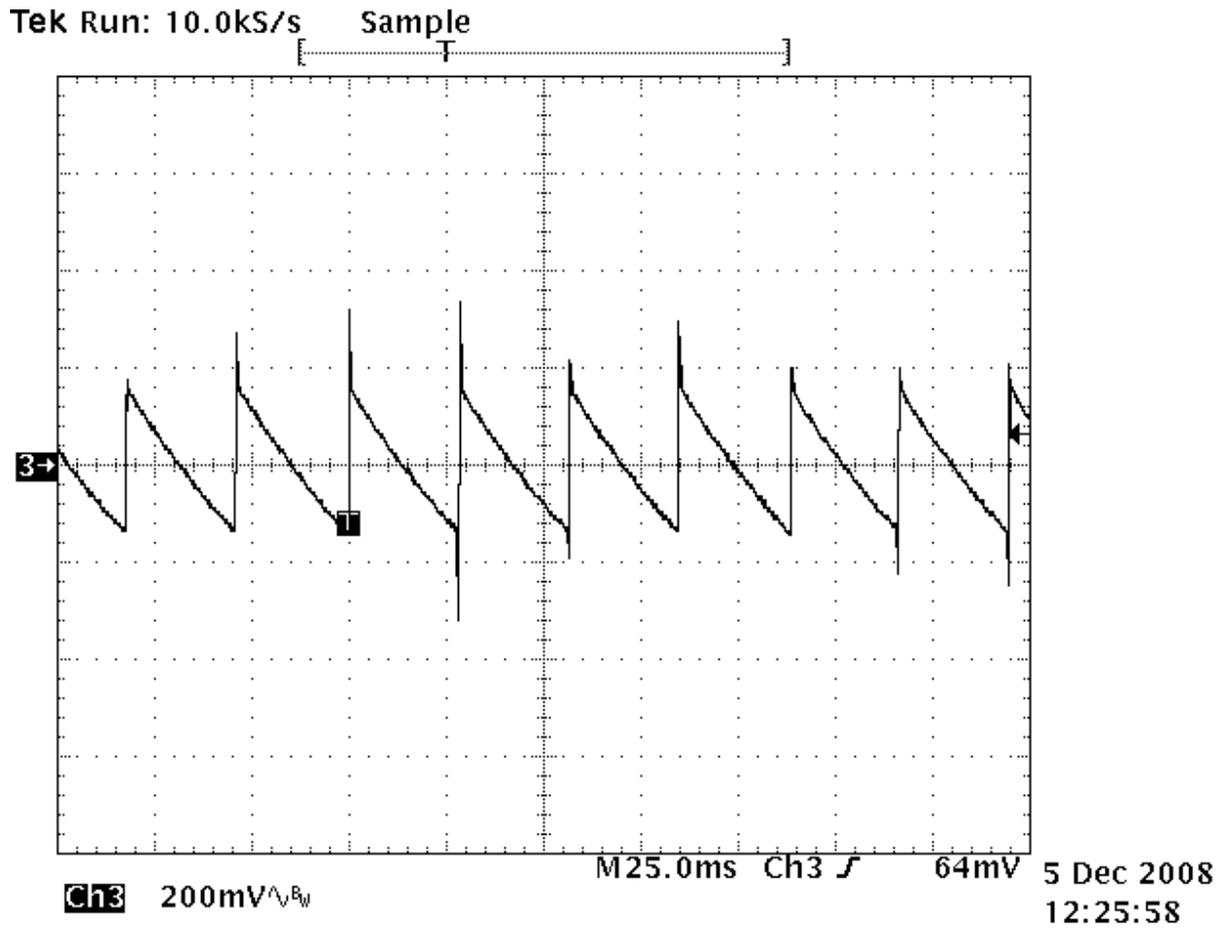

# Output voltage in burst operation

Tek Run: 10.0kS/s Sample

Note:  $V_{in} = 390V$ ,  $I_o = 0A$

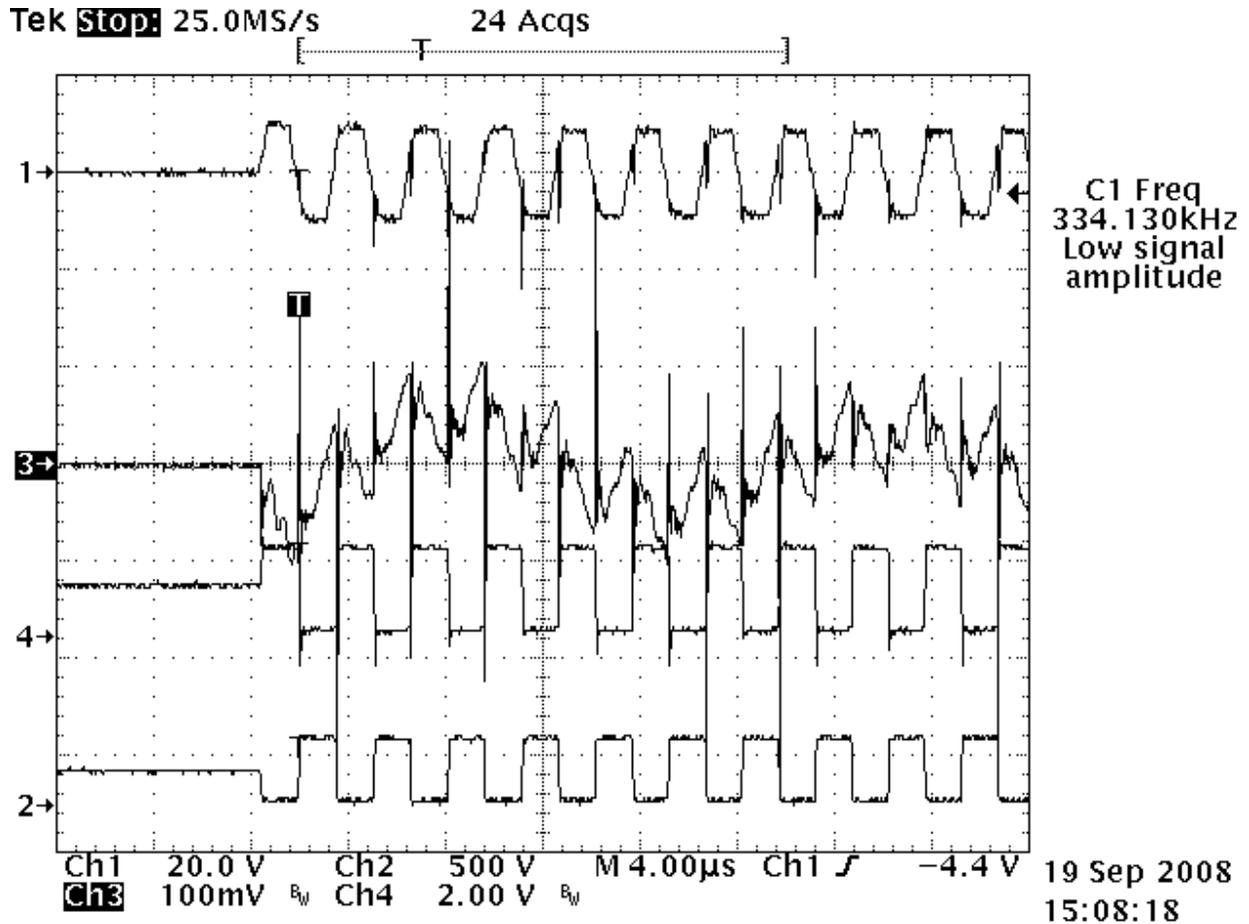

## Output Voltage in Burst Operation (Zoom-in)

Note:  $V_{in} = 390V$ ,  $I_o = 0A$

$V_{in} = 390V$ , burst operation depends on how light load is achieved. At light load the operation may be in burst or may be in output voltage over voltage protection. If OVP, output voltage stays at about 13.1V.

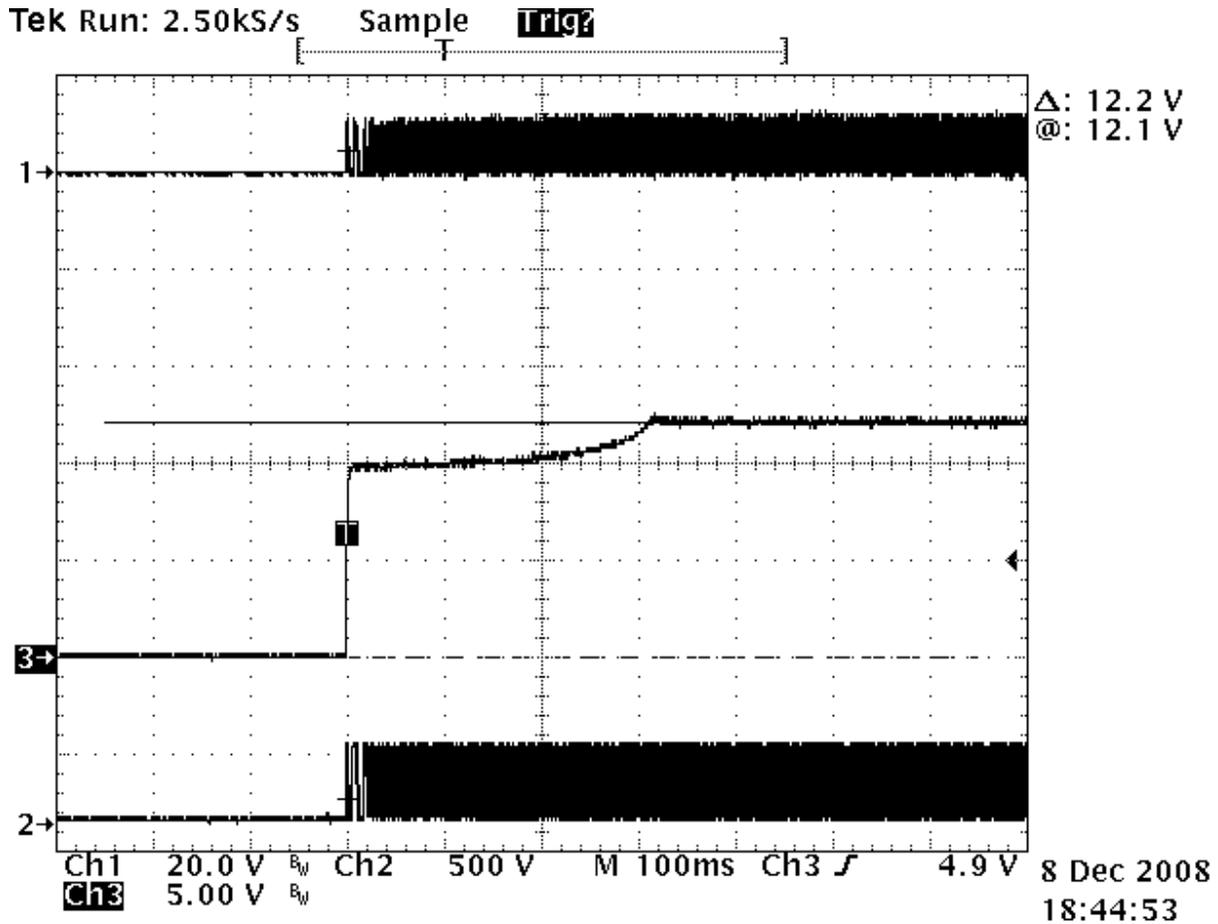

## Waveforms of Burst Operation on the Primary-side

CH1 = Vds of Q6  
 CH3 = resonant tank current  
 CH4 = GD1  
 CH2 = GD2

$V_{in} = 390V, I_o < 0.5A$

## Output voltage with different soft start time

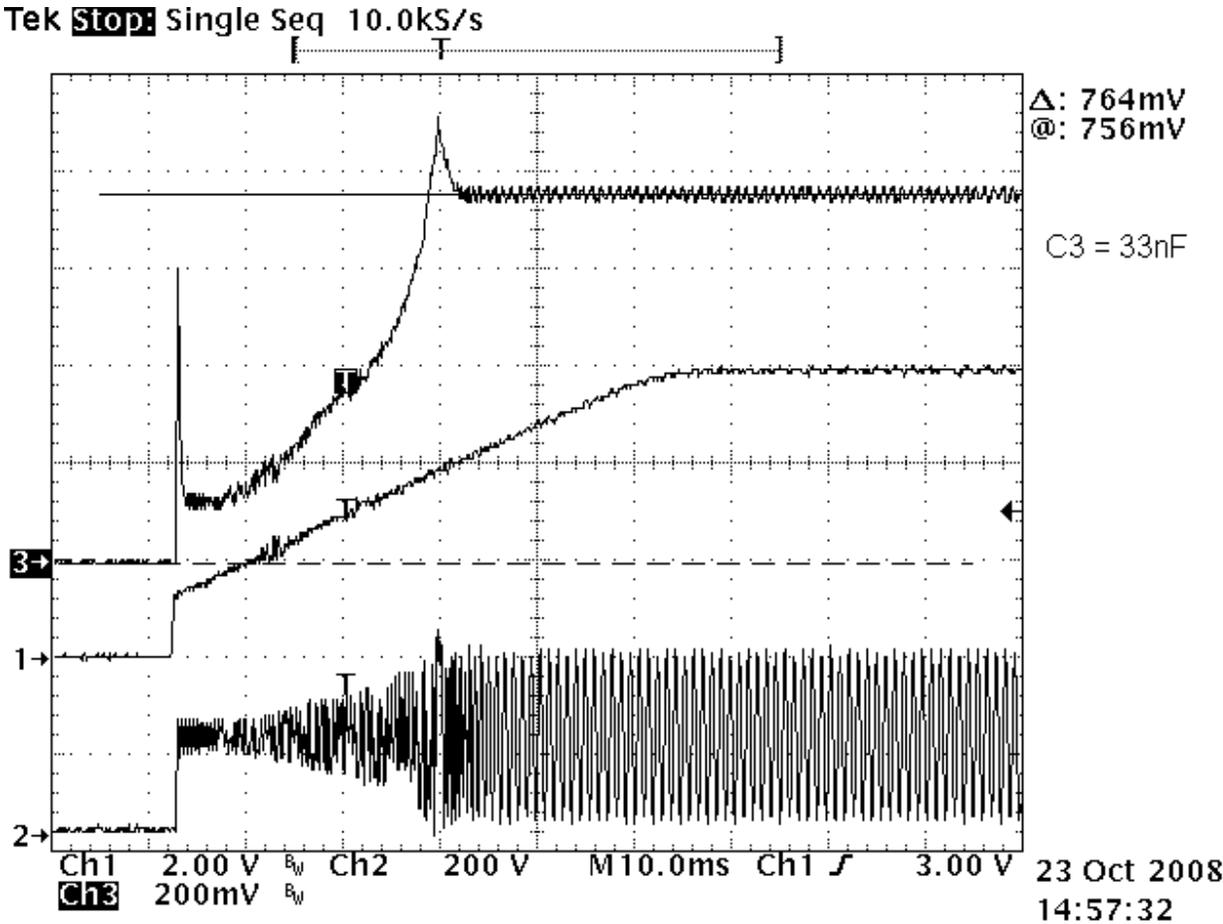

$C_{ss} = 1\mu\text{F}$ , output voltage (CH3) presents long climbing while no  $V_o$  OVP showing. But at light load (1A or less), the primary two MOSFETs were destroyed by OVP. The long ss time may leave resonant cap voltage to reach a higher value than MOSFETs  $V_{ds}$  breakdown.

If  $C_{ss} = 47\text{nF}$ , no MOSFETs (Q5 and Q6) voltage breakdown failure at  $V_o$  OVP.

High temperature was observed on Q5 and Q6 during hiccup and  $V_o$  OVP when the secondary uses SR. With secondary diodes, Q5 and Q6 temperature at room temperature ambient is about 30C to 35C with 400LFM airflow cooling.

# Load Current Sensing, Soft Start and Vds of Q6 (1)

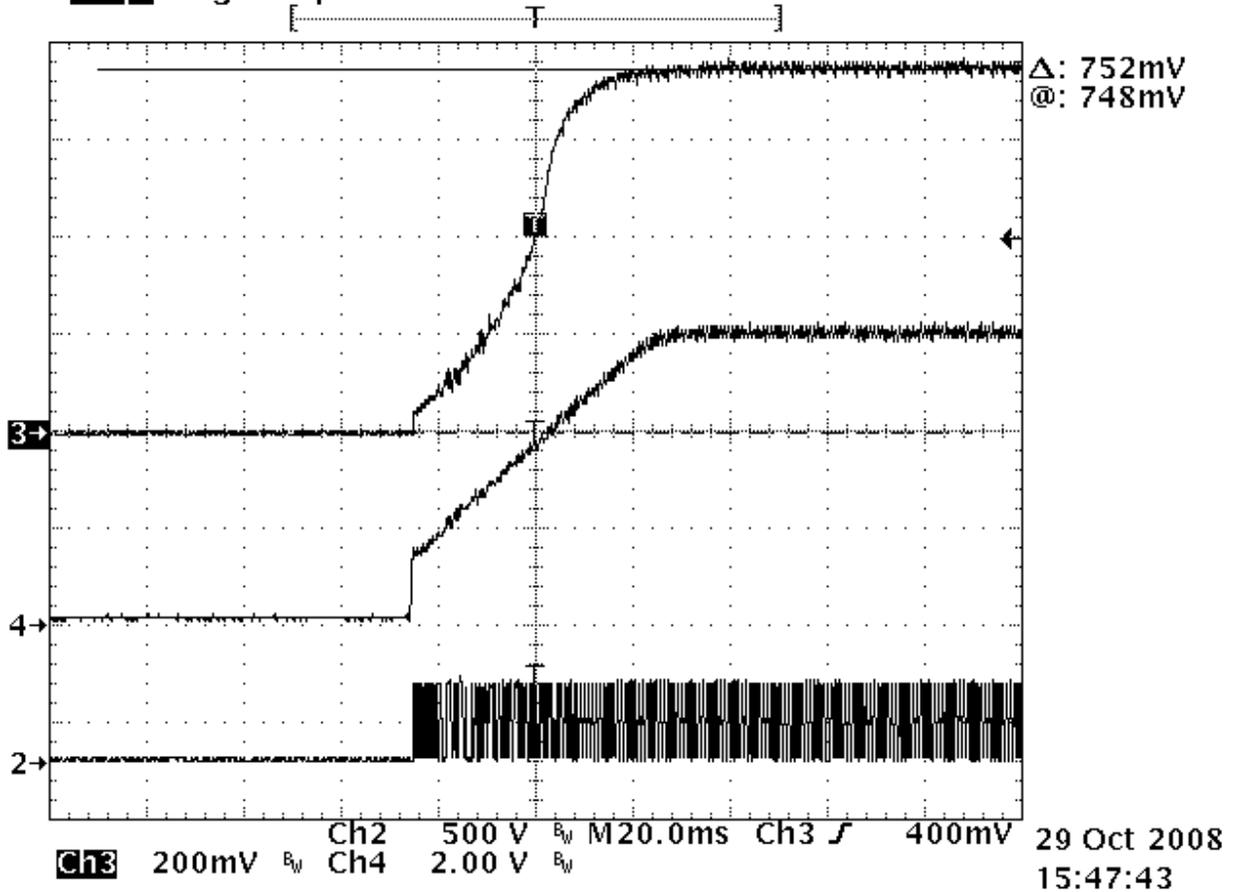

CH3: Load current sensing signal (TP17)  
 CH4: Soft start pin  
 CH3: Vds of Q6

Vin = 390V, Io = 25A

Note: C3 = 33 nF not effectively filtering out current sensing spike at start and may cause false triggering OCP at start.

## Load Current Sensing, Soft Start and Vds of Q6 (2)

Tek **Stop:** Single Seq 5.00kS/s

CH3: Load current sensing signal (TP17)

CH4: Soft start pin

CH3: Vds of Q6

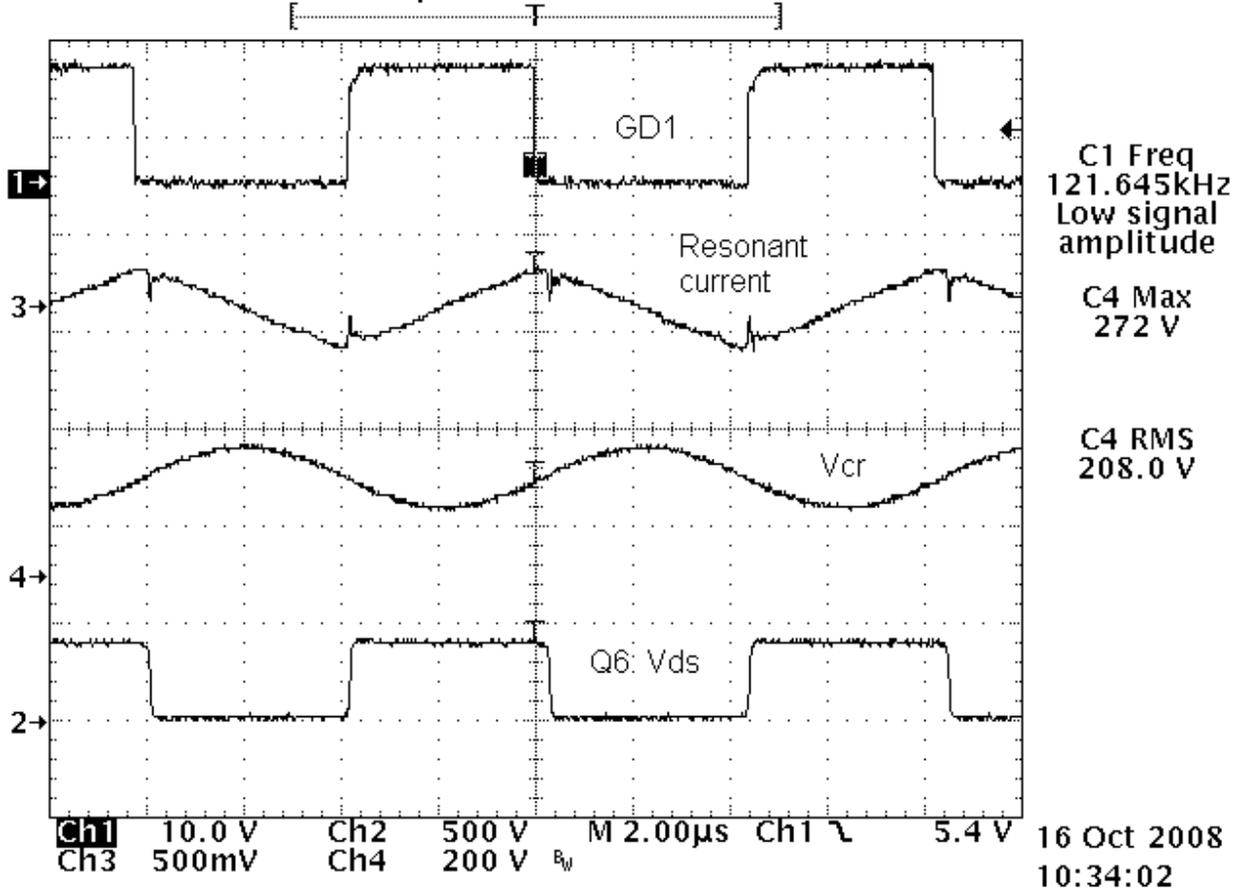

$V_{in} = 390V$ ,  $I_o = 25A$

Note:  $C_3 = 1.0 \mu F$  to effective filtering out current sensing spike at start.

# Waveforms of Resonant Tank (Labels)

Tek Run: 50.0MS/s Sample

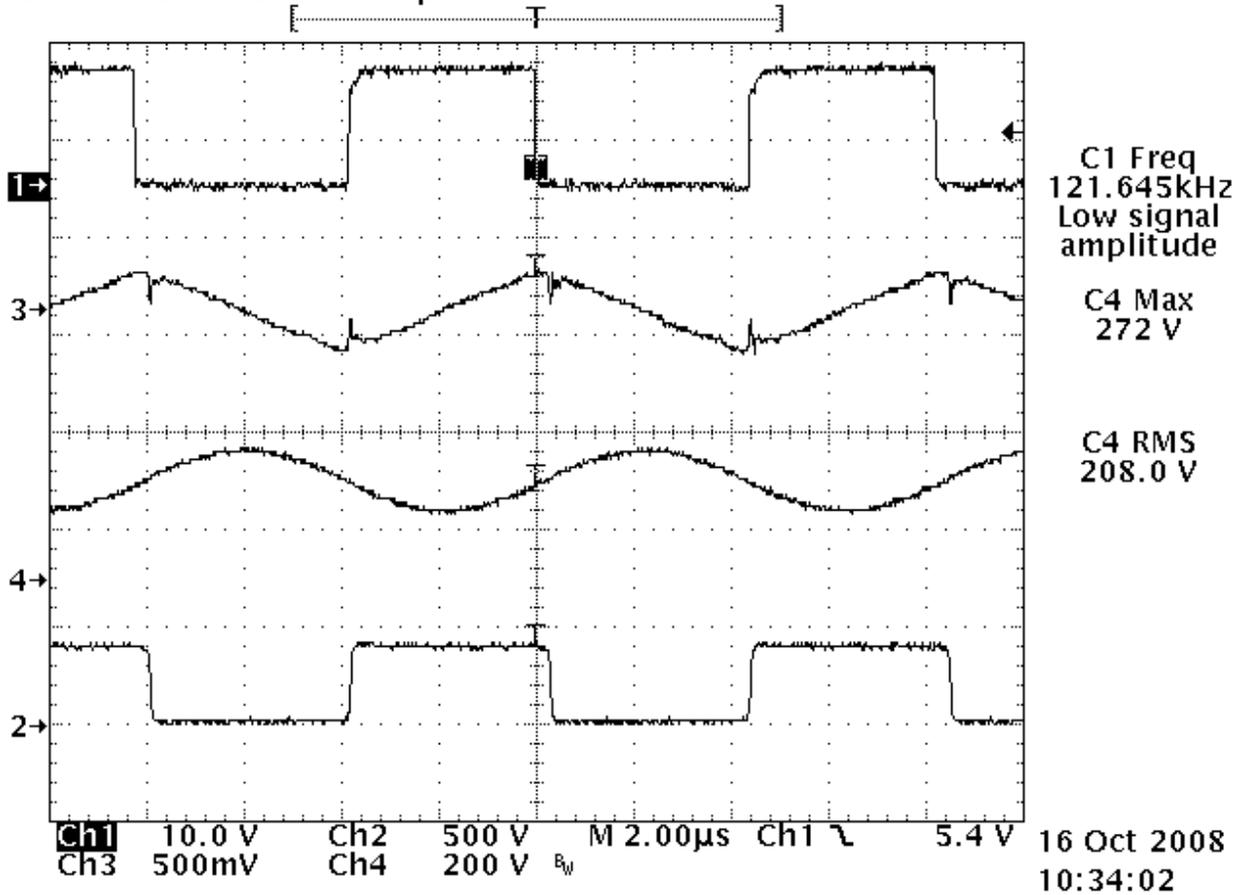

- CH1 = IC GD1-pin
- CH3 = Resonant tank current
- CH4 = Resonant capacitor voltage
- CH2 = Q6 Vds

Vin = 390V

# Waveforms of Resonant Tank (Load = 1A)

Tek Run: 50.0MS/s Sample

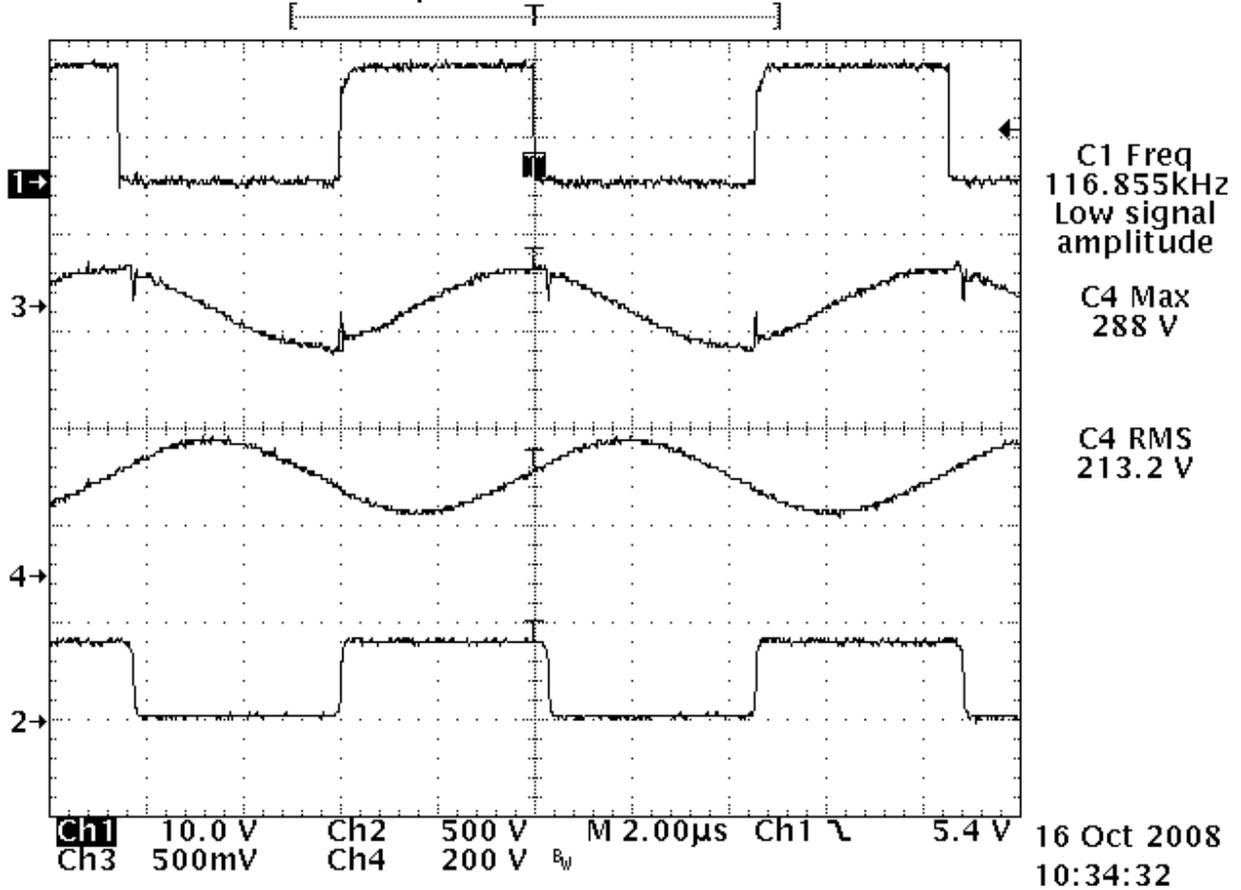

Note:

- CH1 = IC GD1-pin
- CH3 = Resonant tank current
- CH4 = Resonant capacitor voltage
- CH2 = Q6 Vds

$V_{in} = 390V$

# Waveforms of Resonant Tank (Load = 5A)

Tek Run: 50.0MS/s Sample

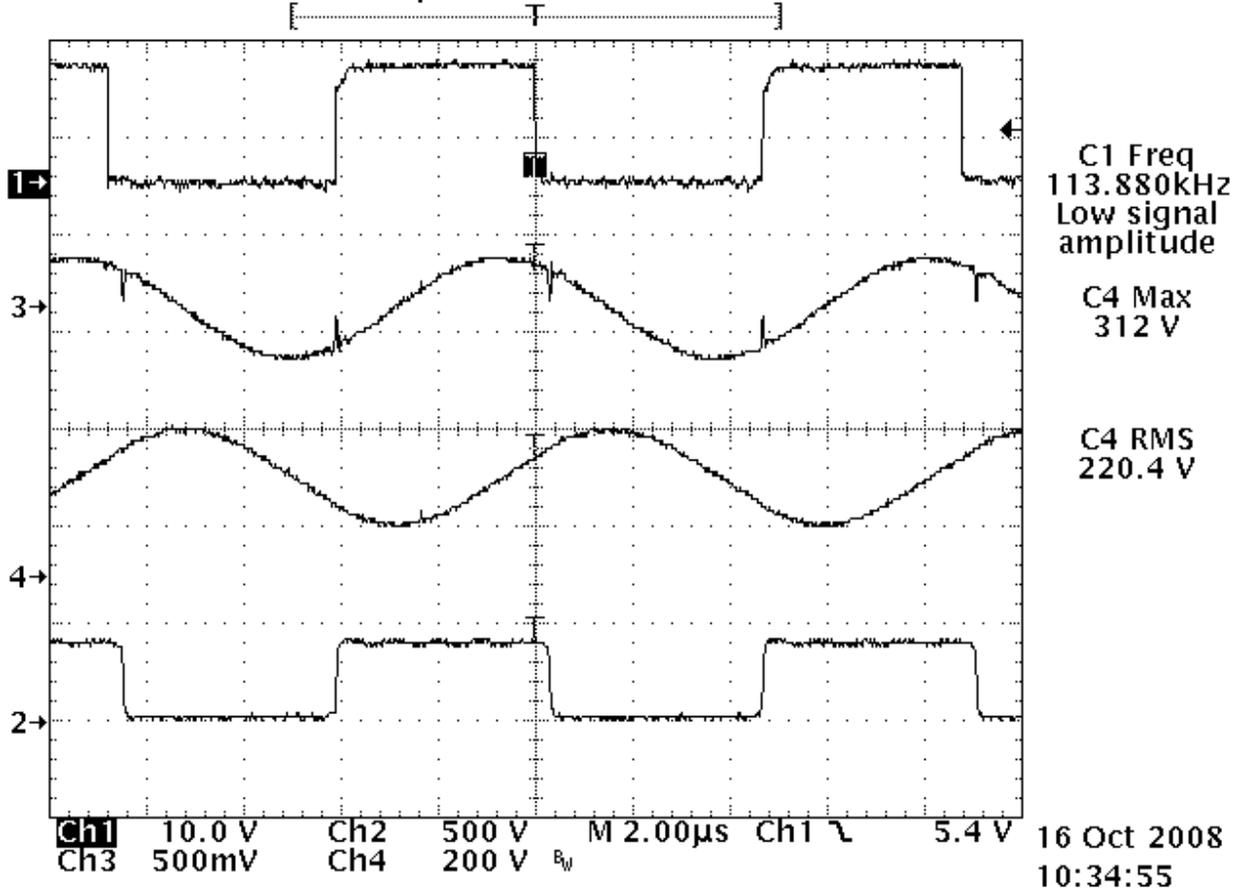

- CH1 = IC GD1-pin
- CH3 = Resonant tank current
- CH4 = Resonant capacitor voltage
- CH2 = Q6 Vds

$V_{in} = 390V$

# Waveforms of Resonant Tank (Load = 10A)

Tek Run: 50.0MS/s Sample

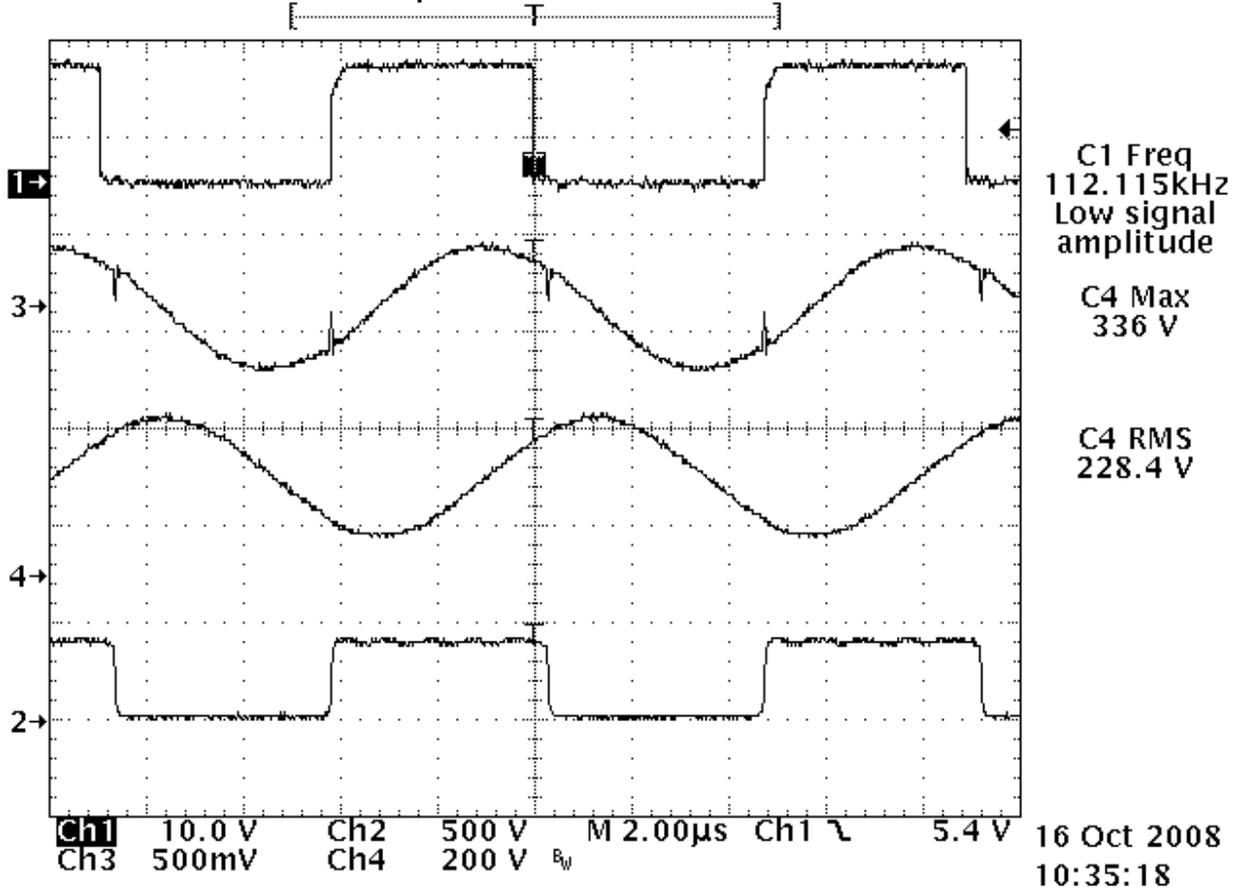

- CH1 = IC GD1-pin
- CH3 = Resonant tank current
- CH4 = Resonant capacitor voltage
- CH2 = Q6 Vds

V<sub>in</sub> = 390V

# Waveforms of Resonant Tank (Load = 15A)

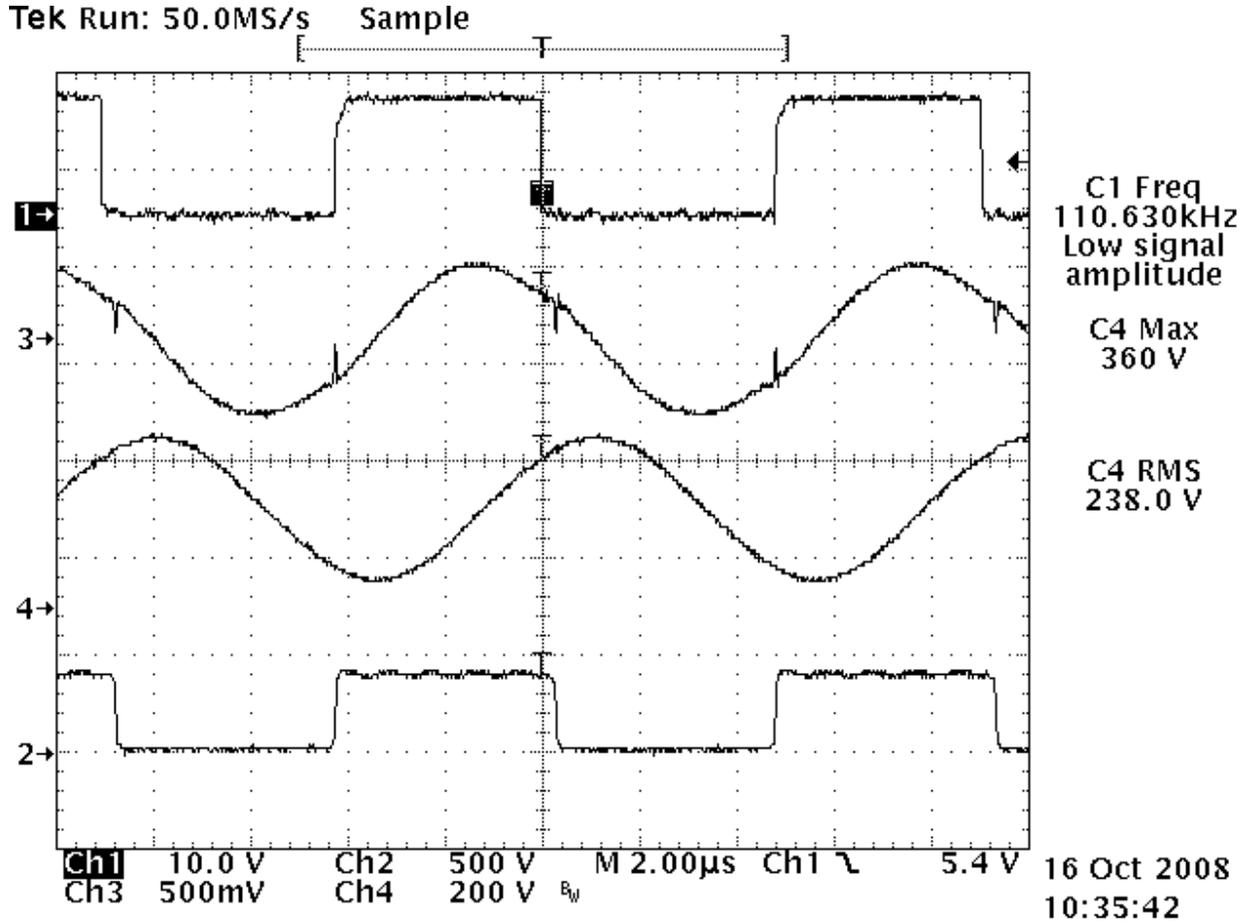

Tek Run: 50.0MS/s Sample

- CH1 = IC GD1-pin
- CH3 = Resonant tank current
- CH4 = Resonant capacitor voltage
- CH2 = Q6 Vds

Vin = 390V

# Waveforms of Resonant Tank (Load = 20A)

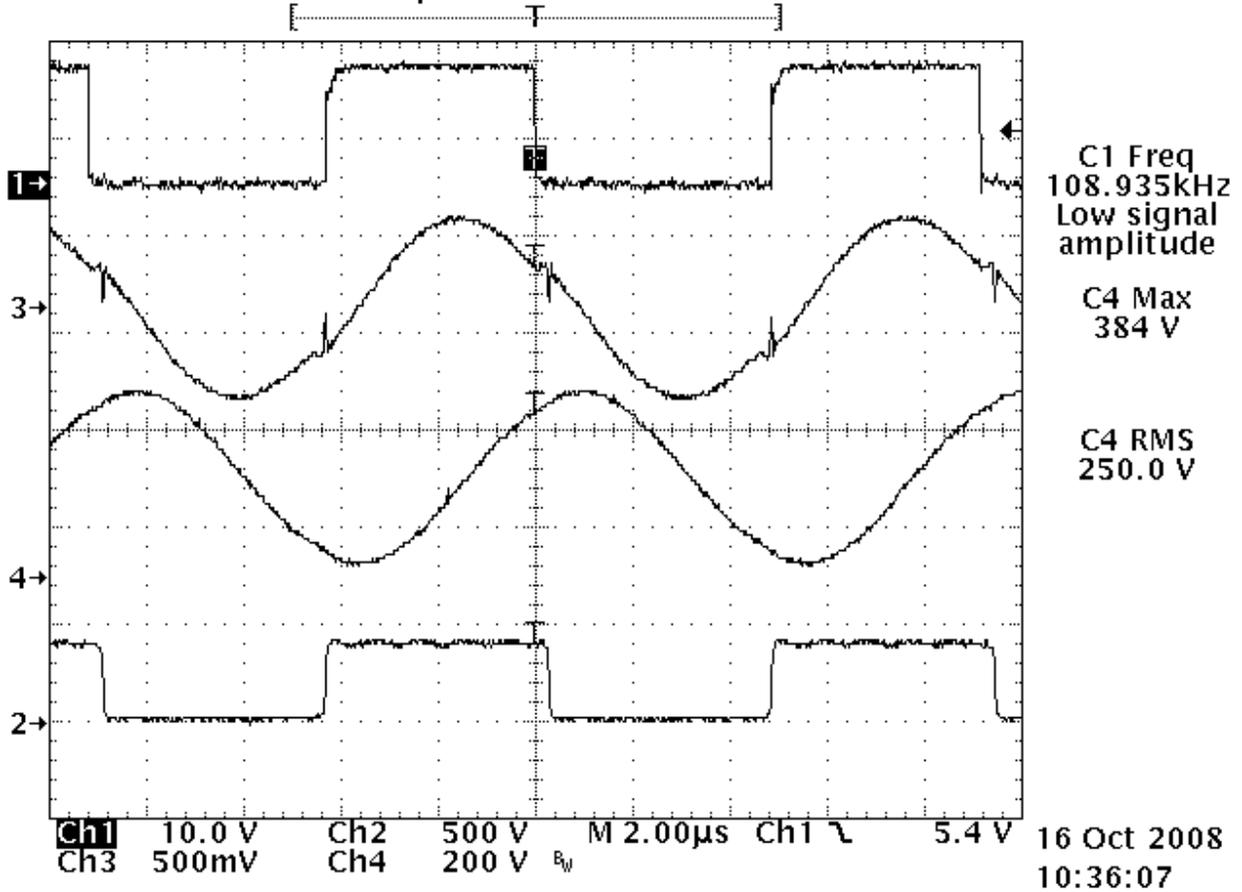

- CH1 = IC GD1-pin
- CH3 = Resonant tank current
- CH4 = Resonant capacitor voltage
- CH2 = Q6 Vds

$V_{in} = 390V$

# Waveforms of Resonant Tank (Load = 25A)

Tek Run: 50.0MS/s Sample

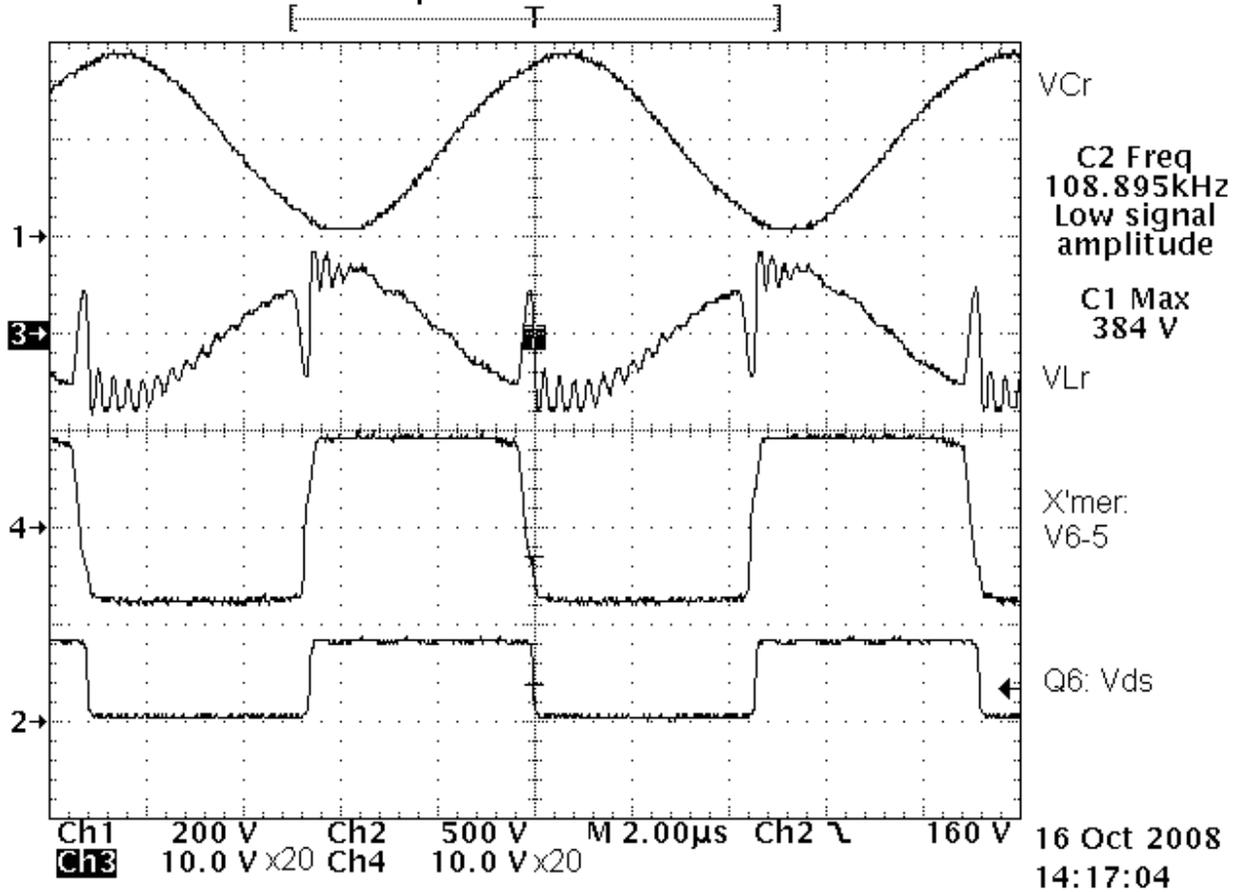

- CH1 = IC GD1-pin
- CH3 = Resonant tank current
- CH4 = Resonant capacitor voltage
- CH2 = Q6 Vds

V<sub>in</sub> = 390V

## Waveform of primary-side voltages (label)

Tek Run: 50.0MS/s Sample

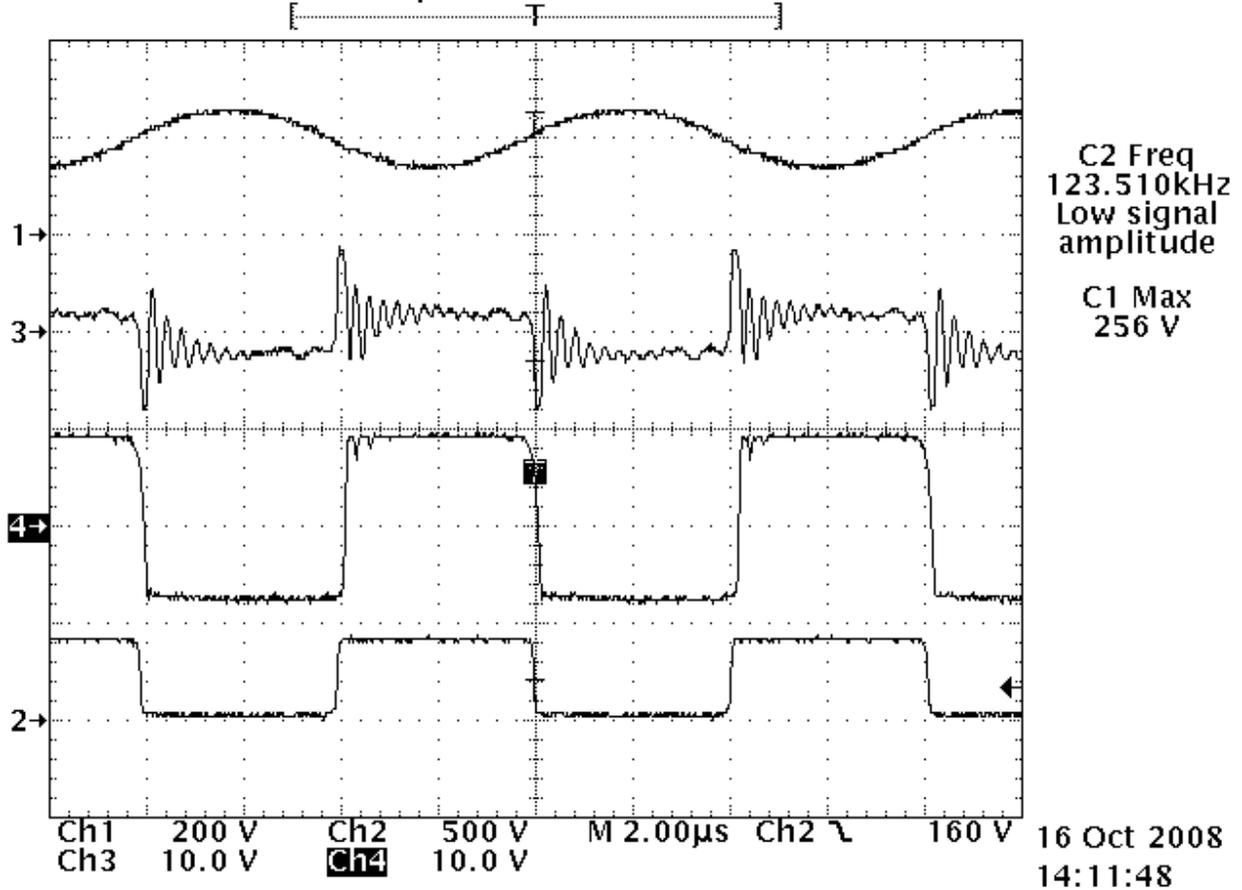

- CH1 = Voltage of resonant capacitor (Cr)
- CH3 = Voltage of resonant inductor (Lr)
- CH4 = Voltage of transformer primary winding
- CH2 = Voltage of Q6 Vds

Vin = 390V

# Waveform of primary-side voltages (1A)

Tek Run: 50.0MS/s Sample

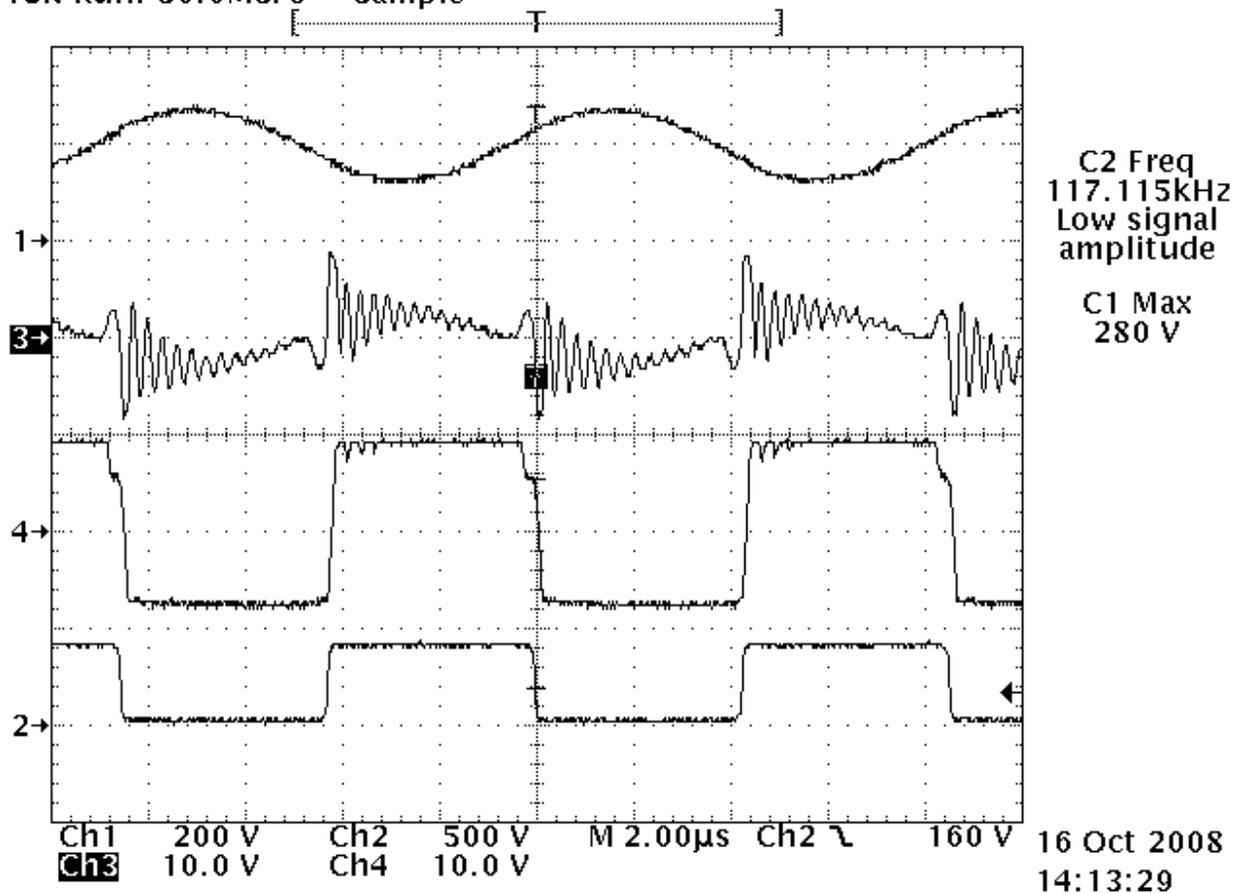

- CH1 = Voltage of resonant capacitor (Cr)
- CH3 = Voltage of resonant inductor (Lr)
- CH4 = Voltage of transformer primary winding
- CH2 = Voltage of Q6 Vds

Vin = 390V

## Waveform of primary-side voltages (5A)

Tek Run: 50.0MS/s Sample

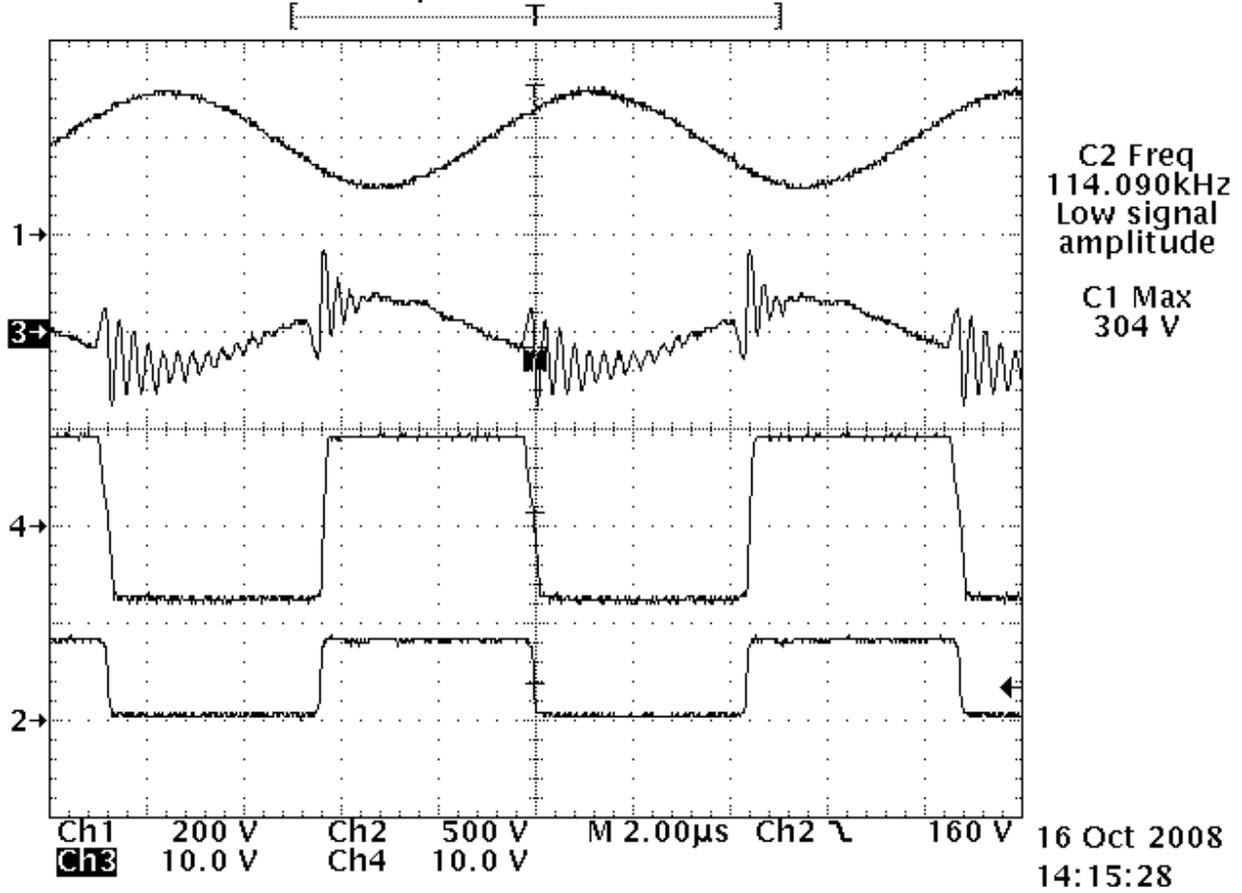

CH1 = Voltage of resonant capacitor (Cr)  
CH3 = Voltage of resonant inductor (Lr)  
CH4 = Voltage of transformer primary winding  
CH2 = Voltage of Q6 Vds

V<sub>in</sub> = 390V

# Waveform of primary-side voltages (10A)

Tek Run: 50.0MS/s Sample

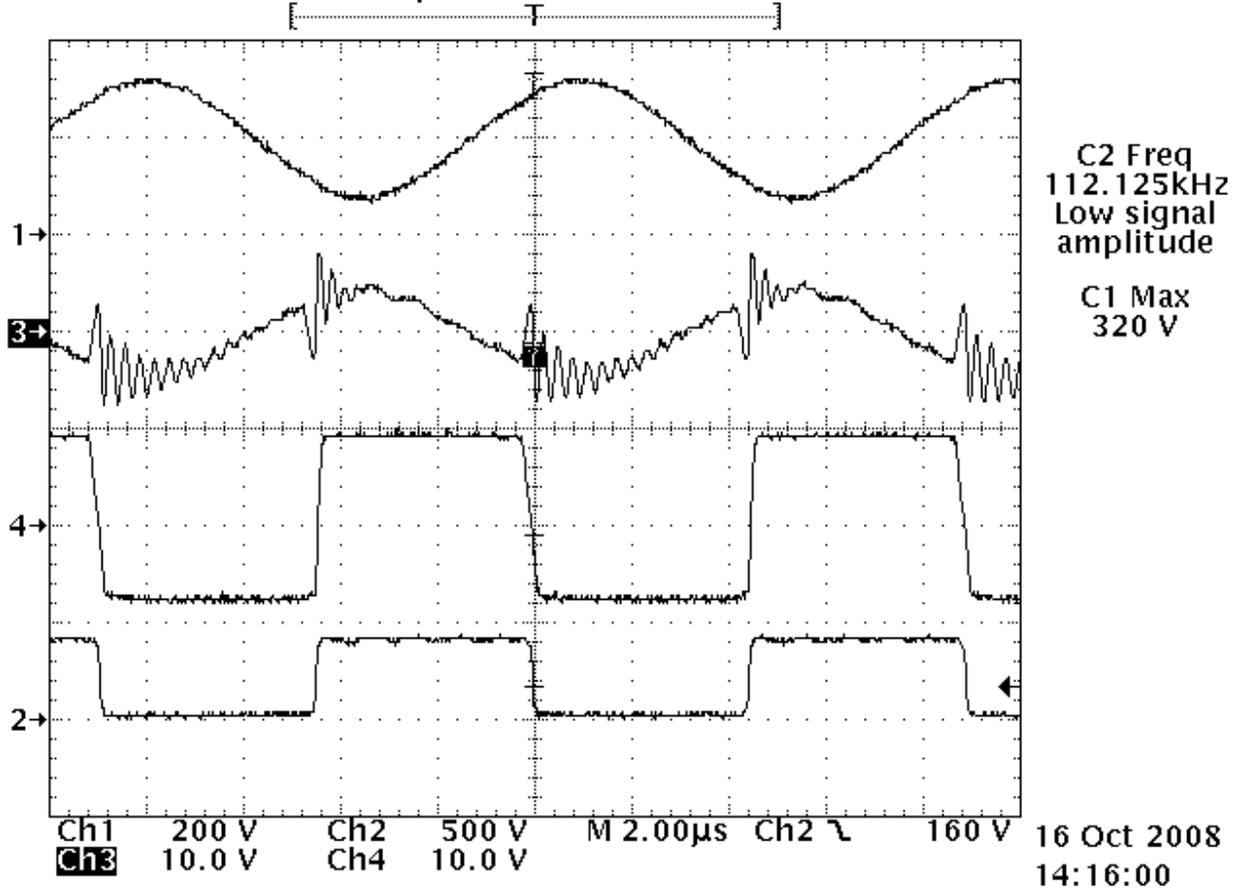

- CH1 = Voltage of resonant capacitor (Cr)
- CH3 = Voltage of resonant inductor (Lr)
- CH4 = Voltage of transformer primary winding
- CH2 = Voltage of Q6 Vds

Vin = 390V

# Waveform of primary-side voltages (15A)

Tek Run: 50.0MS/s Sample

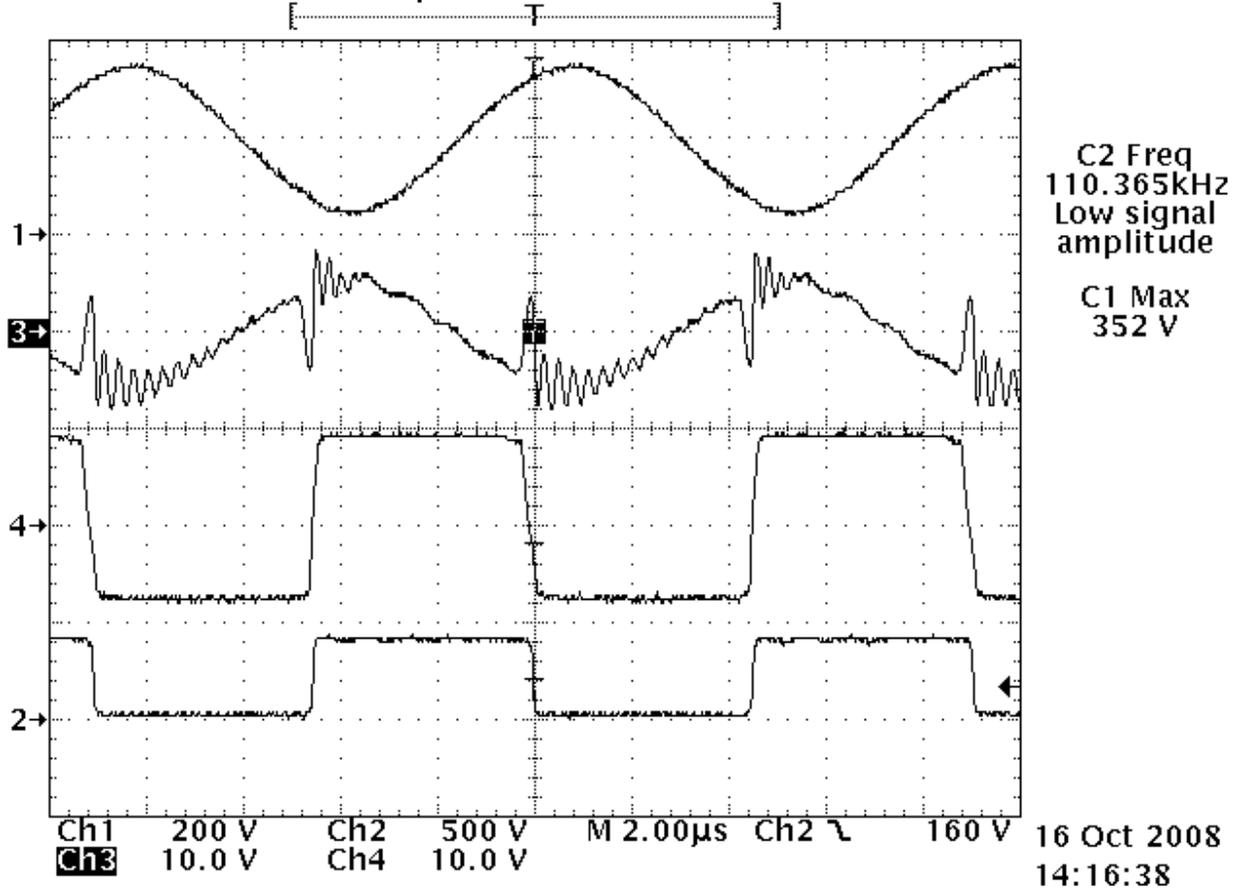

- CH1 = Voltage of resonant capacitor (Cr)
- CH3 = Voltage of resonant inductor (Lr)
- CH4 = Voltage of transformer primary winding
- CH2 = Voltage of Q6 Vds

Vin = 390V

# Waveform of primary-side voltages (20A)

Tek Run: 50.0MS/s Sample

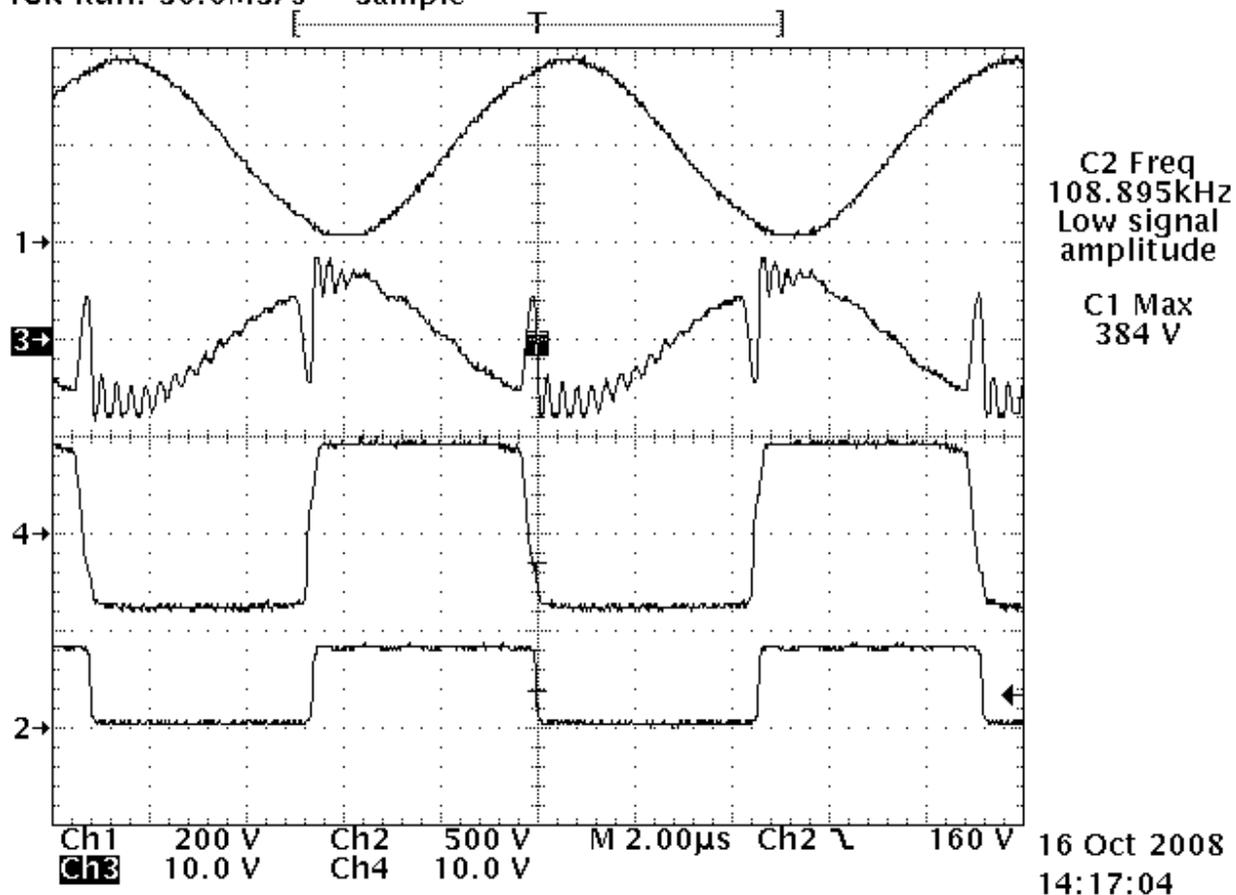

- CH1 = Voltage of resonant capacitor (Cr)
- CH3 = Voltage of resonant inductor (Lr)
- CH4 = Voltage of transformer primary winding
- CH2 = Voltage of Q6 Vds

V<sub>in</sub> = 390V

## Waveform of primary-side voltages (25A)

Tek Run: 50.0MS/s Sample

CH1 = Voltage of resonant capacitor (Cr)  
CH3 = Voltage of resonant inductor (Lr)  
CH4 = Voltage of transformer primary winding  
CH2 = Voltage of Q6 Vds

V<sub>in</sub> = 390V
