3. Performance Evaluation

3.1 INPUT CHARACTERIZATION

3.1.1 INPUT CURRENT/POWER/EFFICIENCY/POWER FACTOR

■ **Test conditions:**

The unit is set at maximum load and the input voltage is varied from the minimum to the maximum value. Efficiency is computed and Power Factor is either computed or measured after 5 minutes warm up at least. Output voltage is measured at the end of 20AWG cable with 1.5M Long.
